# Elixir

A FLASHBULB FLIES OVERHEAD

CLIMBING UP A STRAND OF COTTON

CLOCK-WATCHING

KEEP CLEAR OF THE BUNSEN BURNER FLAME

## Help Poor Old Cyril to Find the Magic Elixir

Imagine the scene:
You are Cyril, a likeable old gentleman — the proprietor of a small but busy chemist's shop. One evening, after a hard day's work, you accidently take a swig of a potent liquid: a strong reducing agent.

Within minutes you have shrunk down to the size of a bottle of aspirins. Frightened and alone, at first you panic... then you remember the magic elixir which is stored at the back of the shop on the top shelf.

The elixir just might restore you to your normal size... it's your only hope. But can you possibly reach it; you'll have to work out a suitable route by climbing up and down and across the shelves.

A fascinating, humourous game packed with strategical puzzles and problems. Keep clear of the lipstick missiles, leap over the exploding flash-bulbs, dodge the dripping acid, and watch out for the curious "circulasaurus" creature!

| | | | |
|---|---|---|---|
| BBC Micro Cassette | £9.95 | Acorn Electron Cassette | £9.95 |
| BBC Micro 5¼" Disc | £11.95 | Acorn Electron 5¼" Disc | £11.95 |
| BBC Master Compact 3½" Disc | £14.95 | Acorn Electron 3½" Disc | £14.95 |

**(Compatible with the BBC B, B+ and Master Series computers).**

The screen pictures show the BBC Micro version of the game.
The graphics of other versions may vary.

### PRIZE COMPETITION

If you complete Elixir (by restoring Cyril The Chemist to his normal size), you can enter our competition. Prizes include an impressive trophy, 10 chemistry sets, and signed certificates for runners-up.

Closing Date: 30th June, 1988.

electron user NEWS

# Electron users are power-hungry

**ELECTRON users are seeking much more power for their machines in ever-increasing numbers. A new survey has revealed that some 40 per cent have upgraded their machines over the last year.**

Of these the majority have opted for compatibility with the BBC Micro, so opening up a vast new potential library of software.

In most cases, the Electron buffs have spent more on the power boosting add-ons than they have on the micros themselves.

With firms like Slogger and Advanced Computer Products offering a variety of machine-extending routes such as sophisticated disc drives, interfaces, expansion roms and ram boards, the future of the Electron now seems assured.

"If companies like this hadn't shown their concern, the Electron may well have become completely extinct by now", observed Derek Meakin, managing editor of *Electron User*.

"But the Electron has always been an excellent machine. It's just that thanks to the ingenuity of some of the firms in the market, it is now that much better".

The run up to Christmas demonstrated clearly that people are not prepared to shelve their Electrons.

PRES, the company marketing the £99 Advanced Plus 3 disc upgrade for the machine, reported sales of 1,000 units a month.

"We just couldn't keep up with the demand", said a company spokesman. "We found ourselves working into the small hours trying to get them out.

"It seems to have really taken off as an ideal Christmas present".

## Support is still strong

**A POLL of companies in the BBC Micro market has shown that some 55 per cent have given active consideration to producing products for the Electron.**

**In all cases those interviewed admitted they had been surprised by the interest that still surrounds the Electron.**

**"You cannot ignore the continuing popularity of this machine", said John Huddlestone of Advanced Computer Products whose firm is now synonymous with the Electron scene.**

**"It's a very nice little market" he said.**

# ADVENTURE IS THE NAME OF THE GAME

*DRAGON-slaying wizards, maidens in distress and the Spirit of Adventure group will travel through time to transform the next Electron & BBC Micro User Show into a fascinating world of adventuring.*

*Goblins, demons, and all manner of mythical creatures have been taken out of the micro chip games world and brought to life.*

*The Spirit of Adventure group, which regularly meets to act out medieval quests, will be at the Renold Building, UMIST, Manchester, from March 18 to 20 disguised as minotaurs, zombies, wizards and goblins.*

*Visitors will get a chance to play the hero or heroine, battling against magical forces and monsters, under the guidance of some of Britain's top role-playing specialists.*

*The very latest in hardware and software will also be on display and, in keeping with the adventure theme, a treasure hunt is being held with prizes of the most popular fantasy games for the Electron.*

*An advice centre manned by experts will be available to help find solutions to some of the more complicated problems.*

*The Spirit of Adventure Group regularly meets at unusual locations to create a realistic illusion of fantasy.*

*They have ranged from medieval banqueting halls to overgrown woodlands. Even an old steel mill has been transformed for their journey back in time.*

*According to Steve Gibson, one of the group's founders, the Renold Building at UMIST "will prove a bit of a challenge, but with a little imagination and a lot of stamina visitors will enjoy the adventure of a lifetime".*

# A record again

ELECTRON supplier Superior Software doubled its previous record sales figures last year. And the company also doubled its yearly turnover for the third year in succession.

"We're going to try and do it again this coming year", said Superior's general manager, Steve Botteril.

"About 40 per cent of our sales were due to the tremendous support of the Electron market. We are committed to continuing to supply quality software for the machine as long as there is a demand".

Four new games scheduled should have the same impact on the market as Elite, says the company.

# Electrons move to the IT centre

STUDENTS learning information technology at Deyes High School in Merseyside have found the Electron a walkover.

In fact over 500 pupils completed a sponsored walk to raise the cash to buy 16 new machines and monitors.

The Electrons have now taken their place alongside a large collection of BBC Micros at the school's Information Technology centre.

To increase their flexibility the machines have been equipped with an ACP Plus 1 and an AP4 disc interface as standard.

"I have known for some time that the Electron was a great machine", said Russ Ellis, lecturer in Information Technology at Deyes High School.

"Having previously only used BBC Micros, some of the teachers were a bit apprehensive. But now they all agree that the Electron is an excellent computer to work with".

The machine has proved so popular that a number of children have bought their own in order to continue studies after school.

A large part of the IT course involves studies for the Cambridge information technology certificate. A thorough understanding of word processors, spreadsheets and databases is needed to qualify for the award.

All students also undertake a compulsory one-year course in computing. "The Electron is playing a vital part in equipping our pupils with the skills that they will need for a secure future", said Russ Ellis.

## Red ruse

*THE first computer game from Russia has infiltrated the UK via Hungary with help from Mirrorsoft agents.*

*Tetris is said to be easy to play, incredibly addictive – and almost impossible to explain.*

*Random shaped blocks appear in a box on the left of the screen, and you have to move and turn them to form a continuous line across the bottom of the screen in order to score points.*

*It may sound simple but if you are not fast enough the blocks on the left build up until they touch the top of the screen. When that happens the game ends.*

*Price £8.99 on cassette and £12.99 on disc from Mirrorsoft (01-377 4645).*

# Rhyming lessons

A CHILD-minding service has taken on six Electrons as members of staff.

The machines are being used to help look after youngsters under five years of age who attend centres run by the Birmingham Kiddy Care co-operative.

Marjorie Dixon, the director, bought the machines after she saw the *Electron User* Nursery Rhymes package.

"This was perfect for what we wanted," she said. "For it would not only keep the children happy but they would also learn at the same time.

"And the mothers who leave their children here when they go off to work are delighted with it all".

The Nursery Rhymes software offers old favourites such as Humpty Dumpty and Jack and Jill as part of a learning environment.

"Since the computer arrived, my four-year-old's spelling has come on in leaps and bounds", reported one happy mum.

"I've always hated computers before – only thinking of them as things that screwed up monthly bills – but this has made me view them in a completely different light".

# THE GALLUP CHART TOP 10

ELECTRON SOFTWARE

| THIS MONTH | LAST MONTH | TITLE (Software House) | PRICE |
|---|---|---|---|
| 1 | 2 | AROUND THE WORLD IN 40 SCREENS *Superior* | 6.95 |
| 2 | 3 | PAPERBOY *Elite* | 9.95 |
| 3 | 1 | SOCCER BOSS *Alternative* | 1.99 |
| 4 | • | LIFE OF REPTON *Superior* | 6.95 |
| 5 | 5 | SUPERIOR COLLECTION VOL 2 *Superior* | 9.95 |
| 6 | 4 | FOUR GREAT GAMES *Micro Value* | 3.99 |
| 7 | 7 | TRIPLE DECKER *Alternative* | 1.99 |
| 8 | 6 | CODENAME DROID *Superior* | 9.95 |
| 9 | • | SPELLBINDER *Superior* | 9.95 |
| 10 | • | MICROBALL *Alternative* | 1.99 |

*Compiled by Gallup/Microscope*

There are three new entries in this month's chart – two new releases from Superior and another new one from Alternative. This means that two Repton games are in the Top Five – Around the World in 40 Screens and the new Life of Repton.

By Pendragon

# Old wine in new bottles

**THIS month sees the re-release of some old adventures in new packaging and at bargain prices.**

The US Gold collection of nine games on one disc or tape is an offer not to be missed. The adventures include Voodoo Castle, Pirate Adventure, Strange Odyssey, Temple of Terror and Buckaroo Banzai.

The package is made good with four old Ultimate arcade-adventures. Retailing at about £18 for the complete collection this must be worth considering.

Meanwhile, Adventure Soft's Scoops, with four adventures packaged on one tape for only £7.95, is also an essential buy.

Those of you who have a Slogger Master Ram board and SEDS or an ACP Plus 4 fitted to your Electron may be interested to learn that Topologika has re-released revamped 5.25in disc versions of the Acornsoft greats, Philosopher's Quest and Countdown to Doom.

These classics have been given extra locations and atmosphere to make them worth looking at, even at £17 each.

In the final stages of preparation is Geoff Larsen's sixth adventure, Hex, which should be on general release very soon.

At Robico, Glen MacCauley is editing Communion, which is part two of The Village of Lost Souls trilogy, and promises to be an absolute blockbuster.

The new Elk Adventure Club release, The Axe of Holt, is also due out this month. If it follows the tradition laid down by Magnetic Moon and Starship Quest, it will be an essential buy.

However, all is very quiet at Shards. I know many of us have been waiting for almost two years for the release of a sequel to Woodbury End. So how about writing to Steve Maltz letting him know that such a sequel would be greeted with shouts of glee from all corners of the Electron software-buying public.

R. Forster of Hale is the first person to contact me to say he has discovered the word Pendragon at a hidden location in Suds.

I have forwarded his name and address to Riverdale Soft and he can expect to receive a complimentary copy of American Suds upon release.

I mentioned last month that 1987 was an exceptional year for adventure releases for the Electron. The quality of software for our machine has never been higher, and this is borne out by the phenomenal array of top notch adventure games in the most recent top twenty.

Remember that these charts are compiled purely from your votes for your favourite adventure games.

It's good to see the two new Robico releases feature so prominently in the chart. I have received a lot of mail praising the quality of these two masterpieces, and surely they are now the yardstick by which all other adventures must be judged.

It is also pleasing that small companies such as Larsoft and Riverdale are producing adventures which readers so obviously enjoy. This can only be healthy for the market in general and Electron users in particular.

With a flood of new releases due in the coming months, the next chart should present quite a different picture.

## READERS' TOP TWENTY VOTES

| | | | |
|---|---|---|---|
| 1 | The Hunt | Robico | 93% |
| 2 | Village of Lost Souls | (Robico) | 92% |

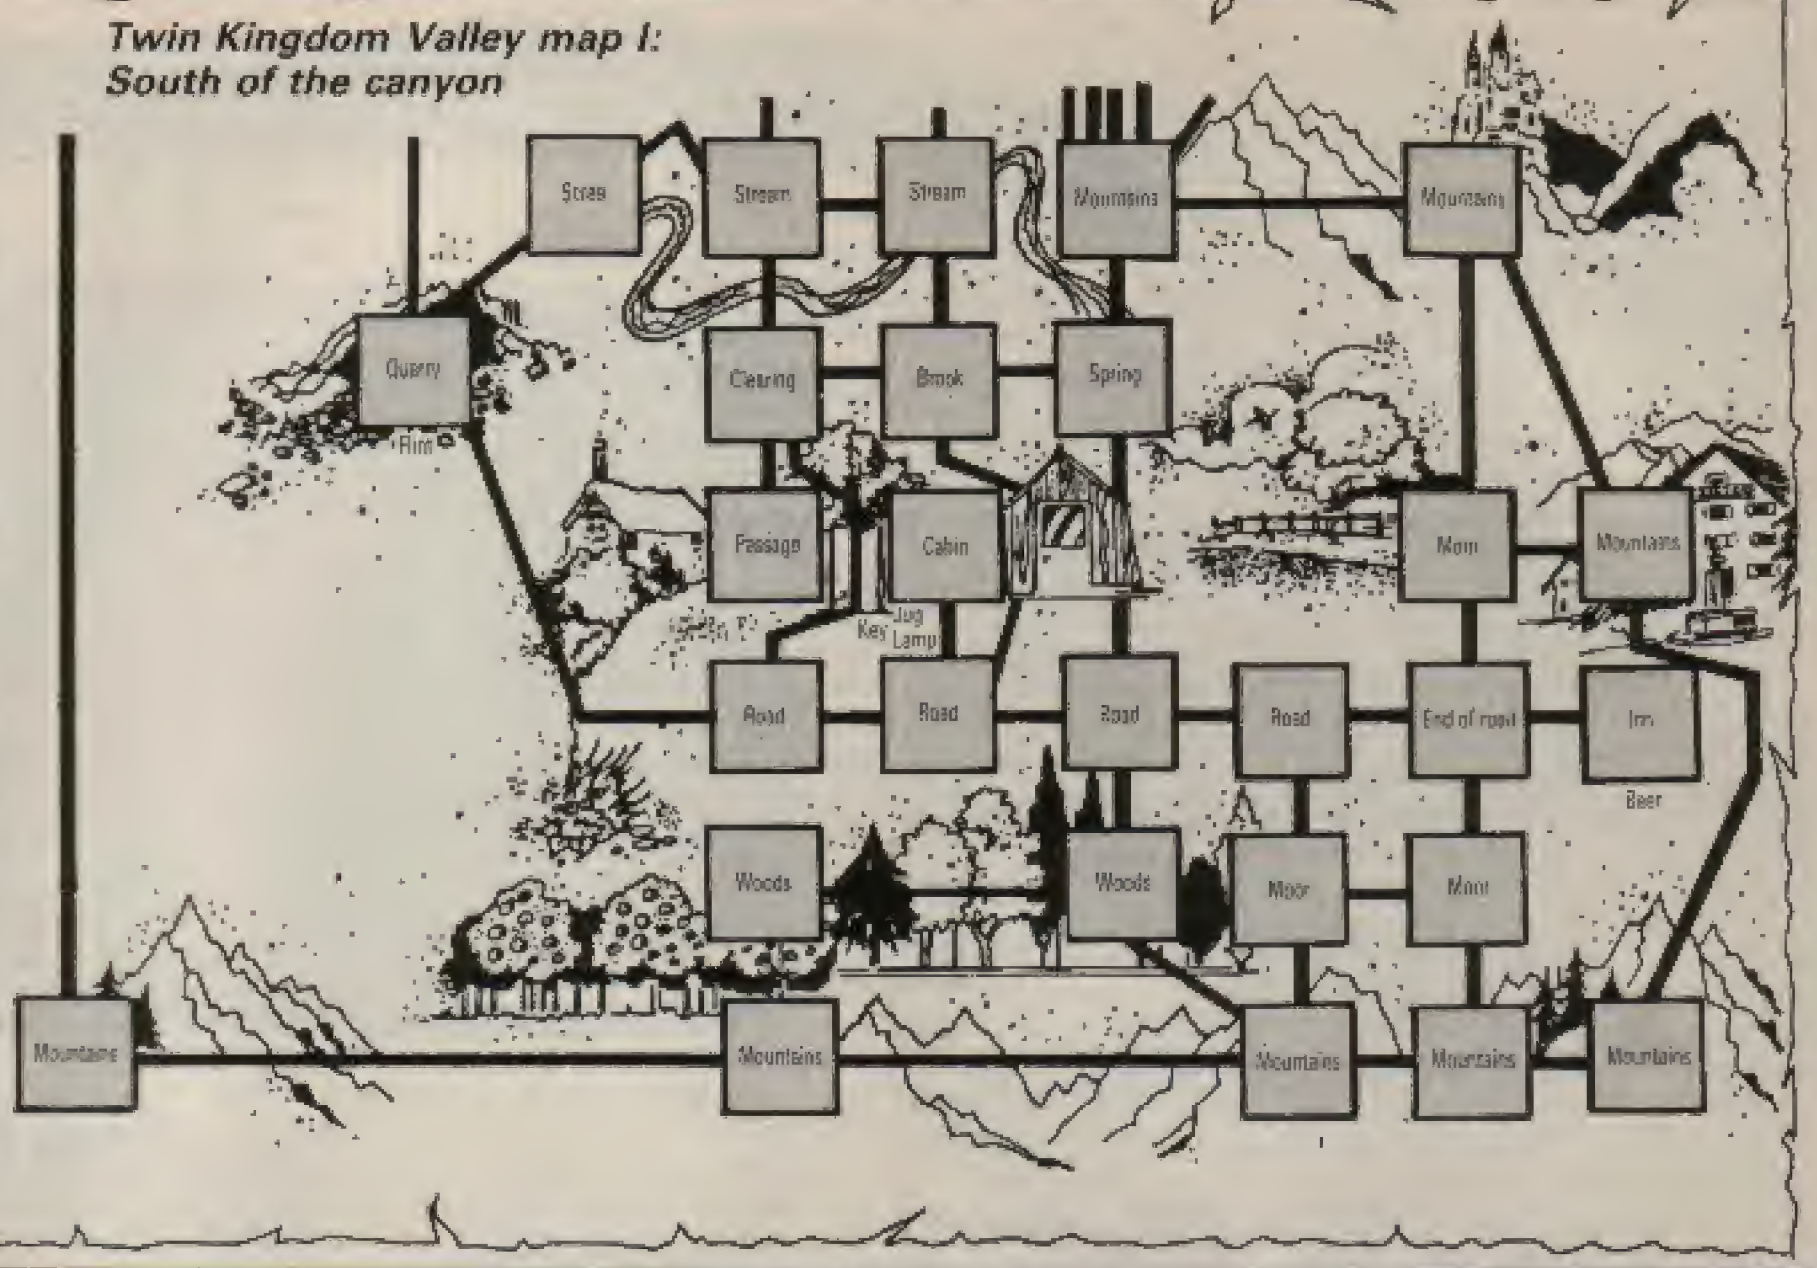
## Adventurer's Glossary

(continued from last month)

**Dagger:** A handy weapon, but usually with some limitations of use.
**Dark:** Always at some point in an adventure, so you will need a light source.
**Desert:** Features in many adventures, and often a maze. Be sure to have a plentiful supply of something to drink before you venture on.
**Desk:** Always worth examining, and try opening the odd drawer.
**Diamond:** Invariably a treasure.
**Ditch:** Often a trap, so beware. It may need crossing so look for a bridging point.
**Doll:** Unlikely to be ordinary, probably a voodoo doll.
**Dragon:** Kill it, but examine its corpse once it is dead.
**Drink:** Essential to survival. Water is usually safe, but avoid Ale and other potent or enticing liquors.
**Dwarf:** Almost always hostile; best to kill and ask questions afterwards.

***Twin Kingdom Valley map I: South of the canyon***



## Readers' Hall of Fame

***The Puppet Man*** – *Geoff Livesey* (continued from last month)

Go East and talk to the muse, then S, S, W, enter the willow and talk to Pierrot. E, E, S, W, S, get the candle, N, E, E and enter manor. UP, N, get the glove, examine the shelf and read the note.

S, DOWN, LEAVE, go onto the stage and talk to the juggler. He will be distracted and drop one of his clubs. get it, jump down, W, S, S, S, W, S. A man will rush off to the west.

Now you can go W, W, W. Drop the club, setting off the trip wire. S, S, W, S, E, into the clown's house. Examine the fireplace, wear the glove and get the poker.

W, N, W, into the tavern. Examine the fire and poke the cinders. Still wearing the glove, get the black key. It will soon cool and you will no longer need to wear the glove.

E, S, E, and light the candle from the clown's fire. W, N, N, UP, enter the door, unlock Pierrot's desk and get his poem. ENTER DOORWAY, DOWN, S, E, N, N, E, E, E, N, E, N, N, N, E, and go onto the stage again. Give the poem to Columbine.

Now jump down, W, N, N, N. Erato will advise you to examine the stump. Get the marionette, S, S, S, S, E, into the Inn. Give the marionette to the Puppet-Man.

***Kayleth*** – *Robert Henderson* (continued from last month)

Go to the shelf where you found the suit and get the bar and cube. Go and get the lenses and the pyramid which is on floor three.

Leave the building and continue until you are in the forest by the Mokki Ray, then spin the bar. Climb the tree, wear the lenses and flip the knot. Take the tablet and examine it, this will give you the AZAP CODE AKN. Go to the AZAP chamber and type AZAP CODE AKN.

Break the tablet which should leave you a rod. Go to the Citadel and you will be surrounded by Zemps. Spin the rod to scare the Zemps. Once you enter the building, type GO SOCLE and a voice will reply, "To be with me, drop the silver three". Now drop the pyramid, cube and rod, and the Socle will descend.

Take the mortar and pod and GO SOCLE. Get the dime and go back to the AZAP chamber and type AZAP CODE ELY. Now you must go back to the city, pay Broznak with the dime and get the bottle of water.

Examine the furniture to find Yurek and give him the rod, then take him to the steel dome. Return to the AZAP chamber and type AZAP CODE EPO. Insert your plasma beam cartridge and fire the beam at the wall. Go back once again to the chamber and type AZAP CODE ELY.

Travel to floor 3 and INSERT YUREK INTO INDENTATION. You will now transform into Yurek. Get the ball and mortar and return to the AZAP chamber. Type AZAP CODE EPO, leave the chamber and go South.

Insert the ball into the icon and when you see the Atech technician, give him the mortar. He will give you a bulb. In the chamber, type AZAP CODE ELY. Get the water, plant the bulb in the compost and water it.

Wait for a few moves and a flower will grow. Take this and drop it in the mortar. You now have essence of tae which can be used to kill Kayleth.

In the AZAP chamber, type AZAP CODE DHT. You will be transported to the control room of Kayleth's starship. The code to open the door is an anagram of all the AZAP codes: ELY, ROO, AKN, EPO and DHT. You should decode this to OPEN KAYLETH DOOR.

To kill Kayleth and finish the game, drop the tae in the pool.

***Enthar Seven*** – *The Boss* (continued from last month)

Equip yourself with the space helmet, oxygen cylinder, spherical sweet, pliers, hammer and torch, then set the teleport to take you to sector three. Once you enter you

***Turn to Page 10*** ►

◀ From Page 9

will find yourself in a confusing forest maze with illogical exits.

By careful mapping using the drop technique you will soon be able to chart nine different locations. One of these is a clearing which leads to a teleport booth and another will reveal a flipper plate if you move the leaves.

Stand on the flipper plate to be transported to an elevated walkway in the treetops. You must now attach the cylinder to the helmet and wear it unless you want to suffocate in the rarified atmosphere.

A quick reconnaissance will lead you to discover three chasms which appear at first to be uncrossable. However, the crevice at the end of the east bound catwalk can be traversed by swinging on the creeper.

On the other side you will find a plank of soft wood which can be used to bridge a gap on three separate occasions before it breaks. However, the drop at the edge of the west bound walkway can be safely jumped without resorting to using a bridge, and a large fan can be retrieved.

The gap to the north of the ramp must be bridged using the plank. At the other side a complicated manoeuvre is involved. If you examine the sweet you will discover it is 15cm in diameter.

The doorway to the tree has an ingenious locking device involving a funnel 9cm in diameter. You need to suck the sweet and examine it regularly until its diameter matches that of the funnel. Now insert the sweet into the funnel and the door will swing open.

You will soon meet a spider with a venomous bite, but don't worry it's only a nightmare.

## Problems Solved

Superior Software's graphic adventure **Stranded**, now being offered at a bargain price, is being discovered anew by many other adventurers and consequently causing a number of familiar problems.

Robin Cornelius asks how to get through the air lock inner door. Simply pick the lock, Robin.

Mark Patterson is puzzled by the fuel capsule and time crystal. You must drop the crystal in the slot in the large control room. Similarly, the fuel must also be dropped in a slot.

Mark is also stuck in **Circus Adventure**. He has activated the generator, but doesn't know what to do next. I suggest you syphon some fuel for your car, Mark.

Ewan McPherson is having difficulty escaping from the whale's stomach in **Philosopher's Quest**. You need to light a match and travel in the opposite direction to the smoke to find the exit.

Mark Hilton needs to follow the paved path off the old side street in Witherton to discover the cottage garden in **Project Thesius**. While Duggie MacDonald should strike a match to give the serpent heartburn in **Sphinx Adventure**.

I must thank Robert Henderson for a copy of **Eye of Zoltan**. It has enabled me to help Trevor Hicks and others to open a few doors. You need a bunch of keys and a password to establish the rights of way.

Finally I must thank James Mottram for his extensive hint sheets for **Dodgy Geezers** and Elizabeth White for the enormous help she has given so freely.

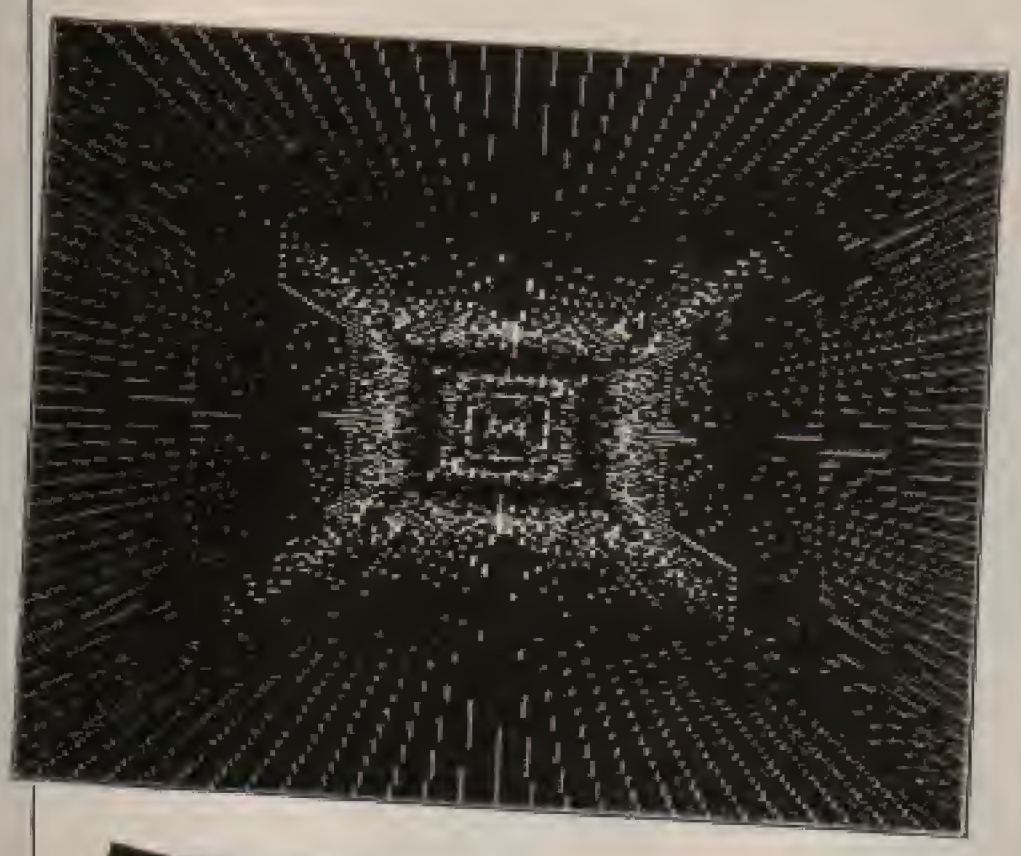
# 10 LINERS

# PALETTRONICS



SPECIAL effects caused by changing the palette always prove popular, and this quickie from Arthur Stone is no exception.

Apparently Arthur first wrote Palettronics for the Spectrum, but as the effects could only be achieved with machine code he says it really came into its own after being re-written on the Electron – in Basic!

Get your sunglasses on before running it.

```

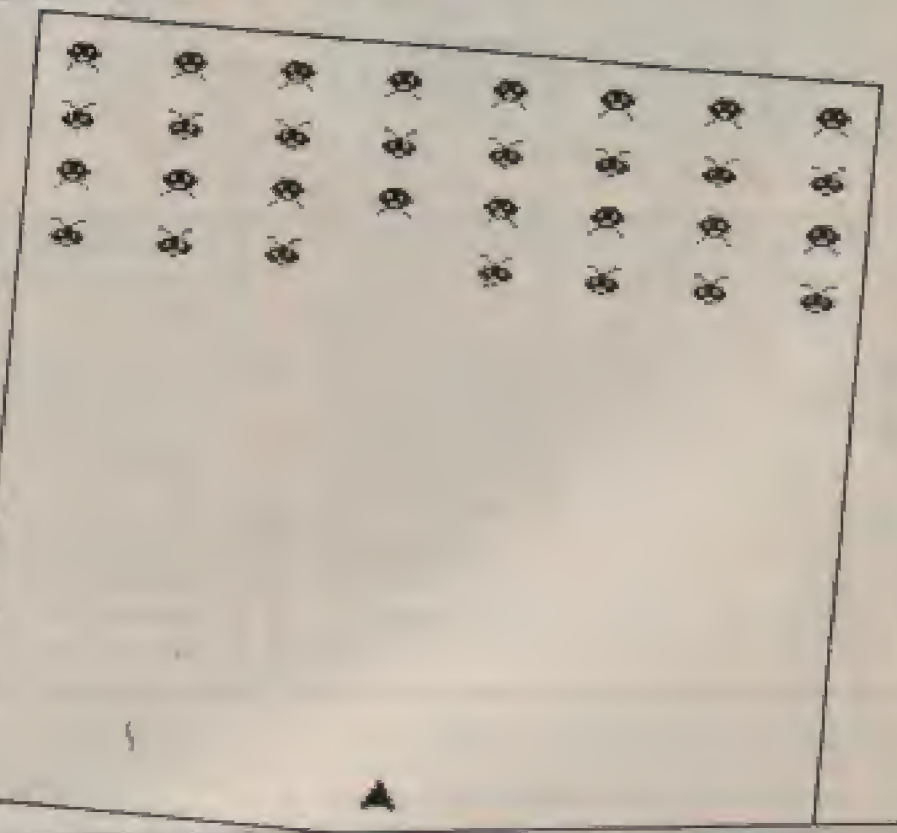
# ALIEN INVASION



SPACE invaders in 10 lines? You bet. While looking a touch daunting at just over 1k of machine code, this great little program from Richard Evans really shows what can be done with the minimum of code.

Use Z and X to move your laser base left and right and Shift to fire. After you have lost a game, the Electron will pause and wait for the spacebar to be pressed before starting a new one.

Type in the first line exactly as shown, complete with abbreviations, or it will not be accepted into the program. Unfortunately there was not enough space for a sophisticated checksum routine, but you will be told if there is a typing error in the data lines.

# Advanced Computer Products

### ADVANCED DISC TOOLKIT
**(01) /M/B/E/C** **£34.50**

Any Acorn user including Master, BBC B+, Electron, DFS, 1770 DFS, ADFS, 2nd. & co-processors A.C.P 's BEST SELLING product containing over 30 commands inc.:- powerful memory & disc editor, search memory/disc/basic, catalogue/unplug ROMS, load/run programs below page, automatic menu, file transfer (inc locked cassette files), ADFS utils etc. etc ("it's superb" . Database Pubs. - "A top-class toolkit - I have no hesitation in recommending it Acorn User Nov 86)
(16K EPROM & FULL MANUAL)

### ADVANCED CONTROL PANEL
**(20)/M/B/E/C** **£34.50**

ACP is a front end control panel language providing a sophisticated yet friendly interface between user and computer for access to Languages, MOS functions and the users own file utility etc. Main features include pull down windows, simple to change MOS configure, floating point calculator, file manager,
SW ROM's facilities.
**(16K EPROM & FULL MANUAL)**

"It's very easy to create an entire customised front end for your own use."–*Acorn User, August 1987.*

"ACP is much better than any of the other front end systems I've seen."–*Acorn User, August 1987.*
"I can recommend it to anyone who wants easy access to the Electron's functions." *Electron User, August 1987.*
**ACPs main features are:-**
- Pull down windows operate throughout
- Users can create their own windows
- Simple to change MOS-s configure options
- Easy entry to other languages
- Floating point calculator
- File manager
- Sideways ROMs utilities

### ADVANCED ELECTRON DFS
**(05) /E/** **£24.15**

Electron & Plus 3 users gain BBC compatibility by adding the Advanced Electron DFS (1770 DFS) this is the same disc filing system supplied with the BBC B+ Now you can produce and access (compatible) BBC disc based software A.C.P also supplies 5¼" disc drives to add to your Plus 3 (inc 2nd. drive adaptor) "ACP has produced another superb ROM for the Electron" Electron User Feb '86
(supplied on 16K EPROM - DFS MANUAL)

### ADVANCED DISC INVESTIGATOR
**(06) /M/B/E/C** **£28.75**

A very powerful Disc utility for standard & non-standard discs. Backup most protected discs, edit any type of non-standard disc, check & repair faulty tracks, create new disc formats, copy 40track discs to 80track discs, verify two non-standard discs
("ADI features an extremely comprehensive sector editor, and one of the finest I've seen" Tubelink on Prestel)
(supplied on 16K EPROM + manual)

### ADVANCED BATTERY BACKED RAM
**(18) M/E/+1** **£39.99**

For Master and Electron users. A battery backed 32k RAM cartridge A.B.R. is a self contained cartridge containing two 16k pages of sideways RAM with a rechargeable battery back up. Each 16k page can be individually locked by software. Supplied with full software support, to include loading software, ROM save, advanced print buffer and a disc utility MAKEROM.
"It's a superb Addon and a must for all serious Electron Users".–*EU June*

### ADVANCED PLUS 4
**(08) /E + 1/** **£79.98**

DISC DRIVE COMPATIBILITY AT LONG LAST' (Electron User June 86) this sums up AP4 & ACP's approach to producing products AP4 is a fully ACORN compatible disc I/face & will accept any standard drive inc PSU runs 1770 DFS (as fitted in the B + & Master) keeps page &Eee, utils in ROM & provides a spare rom socket. ACP's PLUS 4 comes out on top I can recommend it to anyone (E.U June 86)

AP4 should be considered the standard interface for the Electron (AU July 86)

| | |
|---|---|
| AP4 100 | £199.00 (inc VAT & Securicor delivery) |
| AP4 400 | £229.00 (inc VAT & Securicor delivery) |

### ADVANCED PLUS 5
**(09)/E + 1/** **£66.70**

A triple interface cartridge providing
1) a TUBE I/face allowing a second processor to be connected, increasing BOTH speed & memory (PAGE &8ee HIMEM &8eee in all modes)
2) a 1 MHz BUS for control applications & prommers
3) the USER PORT for mouse and graphic devices
Also contains 2/3 ROM sockets and on board operating software for 2nd processor

### ADVANCED 1770 DFS
**3 versions ADM/C(11) – ADE(12) ADE (13)** **£34.60**

ACP have totally re-written the Acorn 1770 DFS, enhancing existing features & adding new ones. The result is probably the fastest & most powerful disc filing system your computer could have With the ability to operate in double density occupying both sides of a disc (640K) Automatic file relocation, improved file handling, 62 file catalogue and Sways RAM can be used as a fast RAM DISC.
(16K EPROM + comprehensive manual)

### ADVANCED ELECTRON DFS E##
**(14) /E+ASR/** **£19.99**

An alternative to our AED(05) for Plus 3 and ASR users This optional alternative DFS is designed for use in Sideways RAM (ASR) and allows the user to operate a disc filing system
&Eee when using the Plus 3 (in ADFS page would normally be &1Dee) The DFS is simply loaded using the software supplied with the ASR from disc (optional upgrade for existing AED users £9.50 on return of original EPROM) (3½" ADFS disc + manual)

### ADVANCED QTR MEG RAM **£79.95**
**(19) (M(ADM)/E+1(ADE)**

New Hi-tech cartridge (normal size) containing an incredible 256k of S.ways RAM although it could be used to store many pages of s.ways ROM images its primary and best use is as a RAM Disc supported by our advanced 1770DFS (Master/ADM or Electron ADE are now upgraded to access the 256k in AQR. Now databases (i.e. Viewstore) can perform at breathtaking speed (over twice as fast as some other 1 Meg Silicon Discs) and animation with up to 25 screens becomes a reality. Price must reflect real value for money and package prices for AQR and ADME are available at £99.95 (existing ROMS may be upgraded when purchasing AQR for £5

### ADVANCED PLUS 1
**E** **£49.95**

The Plus 1 is the main expansion for the Electron. It provides the Centronics parallel printer printer port, joystick interface and 2 cartridge slots into which go ROM cartridges including View, Viewsheet, Pascal, logo and our own popular AP4 disc upgrade.

# Red-hot sequel

*Product: Plan B2*
*Price: £1.95*
*Supplier: Bug-Byte, Victory House, Leicester Place, LONDON WC2H 7NB*
*Tel: 01-439 0666*

SEVEN months after *Electron User* awarded Plan B the title of Golden Game, Bug-Byte has released its red-hot sequel called, surprise, surprise, Plan B2. So what novelties are in store for hardened fans of the original game?

Well, at first sight not a lot seems to have changed. To my disappointment there is still no use of colour, but I hadn't really expected Bug-Byte to have been able to do this and keep all the different characters moving around at the same incredible speed.

The plot on the inlay card looked familiar – which wasn't surprising, as it is identical to that of it's predecessor. As plots go, it still holds up as a fairly decent scenario.

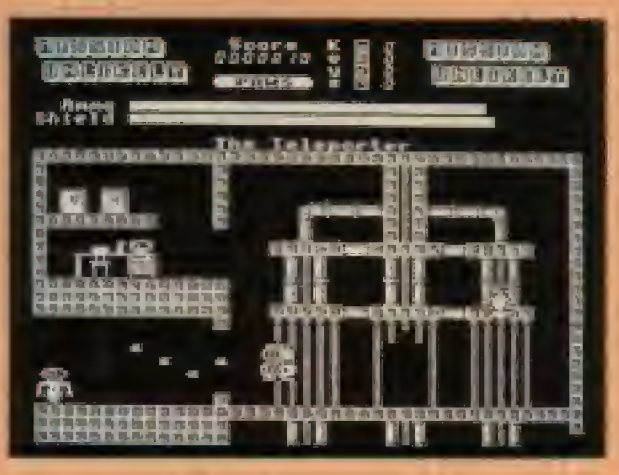
You are in control of a single war drone. Your job is to explore the Togrian Computer Complex, find and destroy all of the computer's parts, and escape intact.

This objective is complicated by the fierce and persistent security robots which patrol the complex's many rooms. Nasty beasts, these – they can fire two dozen rounds of laser bolts quicker than you can say microprocessor.

Your drone is fully equipped with a rapid-fire laser, but your ammo is limited. Replacement stocks can be found in various locations, usually guarded by more security guards.

You have a shield, too. This will absorb quite a number of enemy laser bolts, and you can even ram the security robots, causing them to disintegrate in a most undignified manner. Be careful, though, as repair kits for your shield are difficult to find.

In your search through the complex's many rooms careful thought is required to reach your objective. Some walls block your targets, making them appear seemingly unreachable. That is, until you realise that they will disintegrate under fire.



Not all walls are this obliging. Some have hidden weak spots which you must find quickly while the robot guards are doing their level best to vapourise your shields.

There are sliding doors which can't be opened by anything short of a key. The keys are found dotted about, usually in the most awkward places, and come in four different types. It is most frustrating to battle your way up to a strategic door only to find the wrong key is in your sweaty clutches.

Oilcans and spanners sprinkled around the complex will replenish your shields, although more than once I was needlessly obliterated while trying for an unnecessary top-up.

The security robots are the bain of your life. No sooner has a whole batch been satisfactorily polished off – to the accompaniment of some very good sound effects – than an even larger horde materialises, drenching your drone in shield-depleting rocket fire.

This makes your quest to destroy the complex become almost secondary to hunting down the elusive cans of re-vitalising oil and searching out the odd pain-relieving spanner.

Upon being vapourised at the end of a fruitless game, you may object to the message that "You appear to have snuffed it", which is painfully obvious. But it's fun, all the way through.

The controls are identical to the original Plan B, as has been everything described so far. So now to the differences:

Firstly, in the original game your drone could only wander over black backgrounds. In B2 a most amazing scenery-masking technique is employed, allowing you to drift over

pillars, up walls and through certain floors.

Plan B had fairly nice-looking large sprites which were not animated. The sequel features extremely detailed lovingly-crafted beasties, all of which are animated in some fashion. They tend to be smaller though, to allow for more speed.

One annoying feature of Plan B was the bullets. These flickered at times. In Plan B2 however, not only is every single object 100 per cent flicker-free, but the whole game is faster than the original.

Although in black and white, Plan B2 exudes quality and craftsmanship, from the high-resolution metallic-looking sprites to the textured background of the computer complex.

Nothing seems to have been wasted here – every ounce of speed has been wrung out of the game, and at the expense of nothing whatsoever. I ran Plan B2 on both a BBC Micro and a Master 128, with neither being any faster at all than my Electron.

Generally, all sprite movement has been improved immensely. You can have no real idea of just what this means until you see the game in action. It is probably the best showcase of what your Electron can achieve that I have ever seen.

# Good clean fun

*Program: Bonecruncher*
*Price: £9.95 (cassette), £11.95 (5.25in disc), £14.95 (3.5in disc)*
*Supplier: Superior Software, Regent House, Skinner Lane, Leeds, LS7 1AX.*
*Tel. 0532 459453*

IN Bonecruncher you play the unlikely part of Bono, a cute little green dragon who lives in a castle by the sea. As an enterprising soul, you have set up Bono's Bathing Company making soap, a commodity prized by the monsters who bathe in the moat.

As everyone knows, real soap is made from bones. So to keep the customers happy you must collect the skeletons littered around the castle and boil them up in your cauldron. This turns them into luxurious skeleton soap.

However, the castle is anything but a safe place. There are trapdoors through which you can disappear without trace. On top of this, some of the skeletons are not yet skeletons – they're live and very deadly monsters, with an insatiable appetite for little green dragons.

A further hazard appears in the shape of giant spiders that rush around the walls biting any hapless dragons in their path. These will also eat any bones they find. You must race the spiders to collect the skeletons before they do.

The castle is also inhabited by Glooks, large creatures who love the smell of soap. When you have climbed up a stairway to supply another customer with a bar of soap, they will – after a short delay – all move in the direction faced by this stairway. Although a Glook is not in itself harmful, it will crush you if you get in its way.

An added problem is that you may find yourself, or the way forward, blocked by Glooks if you are unfortunate enough to take a bar of soap up the wrong stairway. However, you can push them or take advantage of the direction in which they are trying to move to suffocate monsters and turn them into skeletons.

Fortunately, Bono's Bathing Company is not a one-man show. Your partner Fozzy, is the brawn of the operation, strong enough to hold monsters and spiders at bay. He's not very bright however, and you must keep an eye on him to make sure he is not trapped or wandering in circles.

Bonecruncher is similar in appearance to Superior's classic Repton, with smooth four-directional scrolling and fiendish puzzles. However, the two games are quite different.

The addition of Fozzy and the

Glooks brings an entirely new dimension to the game, not the least of which is that the Glooks' movement causes the layout of each chamber to change repeatedly around you.

The humour in Bonecruncher is probably its most appealing aspect. The skeletons grin at you and tap their feet expectantly, and if you stand still for more than a few seconds Bono will start to yawn and stamp his foot impatiently. The monsters are also beautifully animated, jumping up and down showing a mouthful of teeth.

Bonecruncher will delight game players of all ages – another sure-fire hit.

# Another brick in the wall

*Product: Trapper*
*Price: £1.50 (cassette)*
*Supplier: Blue Ribbon Software, CDS House, Beckett Road, Doncaster DN2 4AD.*
*Tel: 0302 21134*

THE aim of this budget arcade game is to trap monsters by pushing brick walls around to box them in and finally to squash them.

The title screen is typical of Blue Ribbon – simple and quick to load. There isn't a demonstration mode, so the game flicks between a list of control keys and a high score table.

On starting you are asked to input the difficulty level from one to six. This controls the monster's speed. One is slow and six is fast. I found the slowest speed quite fast enough for me.

The screen consists of a pile of bricks enclosed in a large box. Inside the box are you and a monster, which obviously considers you to be a rather tasty tit-bit. Fortunately you are a strong chap and can push the bricks

around quite easily. The monster can't push the bricks, nor can it pass through them.

So by pushing them round and piling them up you can eventually trap it (if you're lucky and can avoid it for long enough). Having done this, you then push a brick into it and squash him flat.

Screen two is pretty much the same as screen one, except that you now have two monsters to contend with – double trouble. The game now starts to get a bit hectic as you try to trap both. While you're concentrating on one, the other is sneaking up behind you.

Screen three brings three monsters, and four brings four. The final two rooms only have four monsters, but another is born immediately you trap and squash one.

On top of all this, there is also a time limit. A clock in the top-right corner of the screen slowly ticks away. If it reaches zero before you've trapped and squashed all the monsters you die and loose a life.

Although the game has a very simple theme, it is difficult, frustrating and challenging enough to make it highly addictive. The devilish grin on the faces of the monsters is a nice touch and it all adds up to a fun game that doesn't cost the earth. This is recommended.

# Use the force, Luke!

*Product: Star Wars*
*Price: £9.95 (cassette)*
*Supplier: Domark, 204 Worple Road, London SW20 8PN.*
*Tel: 01-947 5622.*

SEVERAL years ago Atari released a coin-op arcade game based on that most famous of space adventure films, Star Wars. Employing fast moving vector graphics it was an instant success. Domark have now released a version for the Electron.

As in the original game, the action is divided into three scenarios – dogfight in space, through the towers and down the trench. These scenes are repeated with increasing difficulty as you proceed through the game.

Scene one is based on Luke's dogfight in space en route to the Death Star. The Empire's Tie-fighters zoom in at high speed, launch laser bolts, then veer away.

Using the four direction keys you steer the fighter's gunsights over the laser bolt and fire. The same tactics also work with the fighters, but the bolts must be your main priority. Each hit you sustain destroys one of your shields – you begin the game with six. Lose every shield and the next hit will destroy your fighter.

If you survive the dogfight you are transported to the surface of the Death Star (though not on level one). Here you begin a strafing run through a forest of laser-firing defence towers.

I found this to be the easiest of the three scenes. By swinging your sights slowly left and right while pressing the fire button you can destroy all towers and laser bolts in your path without sustaining a hit.

The final scene is set in the trench. To destroy the Death Star you must travel its full length and accurately blast the exhaust port at the far end. Success is rewarded with an exploding Death Star.

On level one the only hazards in the trench are laser bolts – you can avoid these by flying high and left, only venturing down into the trench at the very end to zap the exhaust port.

Unfortunately these tactics don't work on the higher levels, where the trench is criss-crossed by barriers – these must be flown over or under.

Unfortunately although Star Wars sounds attractive, the graphics are chunky (Mode 5), monchrome and at times, poorly defined. The gameplay is very sluggish and the controls are slow to respond. On top of this you have to sit though a 20k loading screen before the game starts to load.

All this adds up to a pretty dull, unexciting fare. I would advise you to try before you buy.

# High flyer

*Product: Spitfire '40*
*Price: £9.95 (casette)*
*Supplier: Mirrorsoft, Athene House, 66-73 Shoe Lane, London EC4P 4AB.*
*Tel: 01-377 4645*

ALL you lovers of those old World War II films can now train to become top fighter pilots with Spitfire 40, a new flight (or should that be fight) simulator from Mirrorsoft. With plenty of practice, skill and just plain good luck, you can rise to the rank of Group Captain and be decorated with the VC, DSO and DFC.

On starting, you are presented with five pilots' names from which you must select one. A log book for the pilot is then shown. This displays his name and rank, the number of flying hours clocked up, the number of victories and any medals awarded. I was disappointed not to be allowed to enter my own name here.

Finally, a menu is printed which shows the three game option. The first is a practice run which enables you to concentrate on learning how to fly the Spitfire without the worry of being shot at by enemy planes.

A successfull landing adds the flying hours to your log. Once you've clocked up enough hours and feel fairly confident of your ability to fly you can try your hand at aerobatics in preparation for combat.

Combat practice places you in a situation where you can try out your technique. In this mode, crashing or being shot down does not count against you on your log.

Once you've had enough of this, you can move on to the real thing – air to air combat. First you are given your mission instructions. These tell you how many enemy planes there are and where they are situated in relation to the runway.

When airborne, you can have a map of the area you are currently flying over displayed on-screen. The enemy planes' positions and their heights are also indicated.

My favourite part of the game is the dogfight. I found it difficult to hit the enemy at first as it takes about a second for the shots to reach their mark.

Overall, the game is fairly easy apart from landing the Spitfire. The dogfights can be quite tense a  l the first time you shoot down an enemy aircraft you get a real feeling of achievement.

The instruction manual is clear and tells you all you need to know about the game. Not only that, it also gives you a brief, but interesting, background history to the Spitfire and includes a small bibliography of books for anyone wishing to learn more about this great aircraft.

The one thing I found lacking was that almost undefinable something which makes a game addictive. I enjoyed playing it for short periods, but it isn't one of those I would automatically reach for when sitting down for a gaming session.

# Winter Warmer

*Program: Winter Olympiad 88*
*Price: £9.95*
*Supplier: Tynesoft Computer Software, Unit 3, Addison Industrial Estate, Blaydon, Tyne & Wear NE21 4TE.*
*Tel: 091-414 4611*

**NOT so long ago the market seemed to be swamped with sports games of every description. But all of them had one thing in common – joystick or keyboard bashing to the point of destruction.**

My first thought when I saw the cassette inlay for Winter Olympiad 88 was "Not again . . .", but the sheer addictiveness of this game soon changed my mind.

The scene is set as soon as you open the box, with a four page introduction to the forthcoming Canadian winter olympics by TV presenter David Vine. It conjures up pictures of crisp, snow-covered and mist-shrouded mountains dotted with pine trees that rustle in the wind.

However, as the manual itself is only six pages long, all instructions, hints and tips for the six different events are squashed on to the last two pages in small, eye-straining print.

That aside, the first part of the game to load is the core, so called because it is the section of program which controls each event.

This takes rather a long time, but eventually a rotating scoreboard appears, which stops turning and asks for the number of participants and their names. A nice touch this, and the revolving scoreboard crops up again later after each event.

The first event – Bob Sled – is quite hard. Using only the Z and X keys to apply left and right braking, you guide the bob-sled around each bend and curve of the icy channel, trying to squeeze as much speed as possible from the fragile-looking craft.

Banking too hard causes a heart-rending squeal of metal on ice, followed by the sled overturning, with the occupants falling out and ending up trapped underneath. It looks and sounds quite painful.

The scenery is animated quite well for an Electron game, with pine trees rushing – or creeping as some irreverent souls muttered – past to either side of your speeding toboggan.

Speed Skating is the next event and visually this is perhaps the best of all six. You are presented with two views of your player, one from the side and one from in front. These are synchronised quite well, with both heads bobbing together, and both sets of arms and legs swinging in unison.

I have to admit that pretty though it is, I'm not sure what purpose is served by splitting the display in this fashion. Nevertheless it looks good, even when the front view player banks sideways and his legs stop, while the side view player keeps his legs pumping steadfastly away!

Your controls for this event are the same as before, but this time an element of familiarity creeps in – you have to pump the keys alternately to gain speed and momentum.

There is an element of skill to this, however. Pressing the keys too quickly causes the skates to slip and you lose speed: Slow down and the speed needle starts to climb again.

The only niggle with this event – and with some of the later ones – is your inability to abandon the game if you are fed up and want to move on to the next one.

Each event has three heats, and if there are four players participating with each heat lasting 1-2 minutes, it can take 15 minutes to move on to the next event.

Moving on to the Ski Jump, event three, you are greeted with a spectacular view of your player poised at the top of the jump. After the three beeps you are again pumping the Z and X keys for all you are worth.

This time, finger speed is vital if you are to gain enough momentum for a good jump.

As the man reaches the end of the slide, the scene switches to a side-on view of your player being catapulted into the air. Now the Z and X keys become alignment controls for the skis.

The skis tend to drift apart in flight, so you must keep them in line until landing. Otherwise not only could you lose points for bad style, but also you might end up unceremoniously sliding face-down in the snow.

I quickly tired of this event, as after a while the game turns into a monotonous frantic key bash, followed by a quick bit of ski-alignment. There isn't really enough skill in this one.

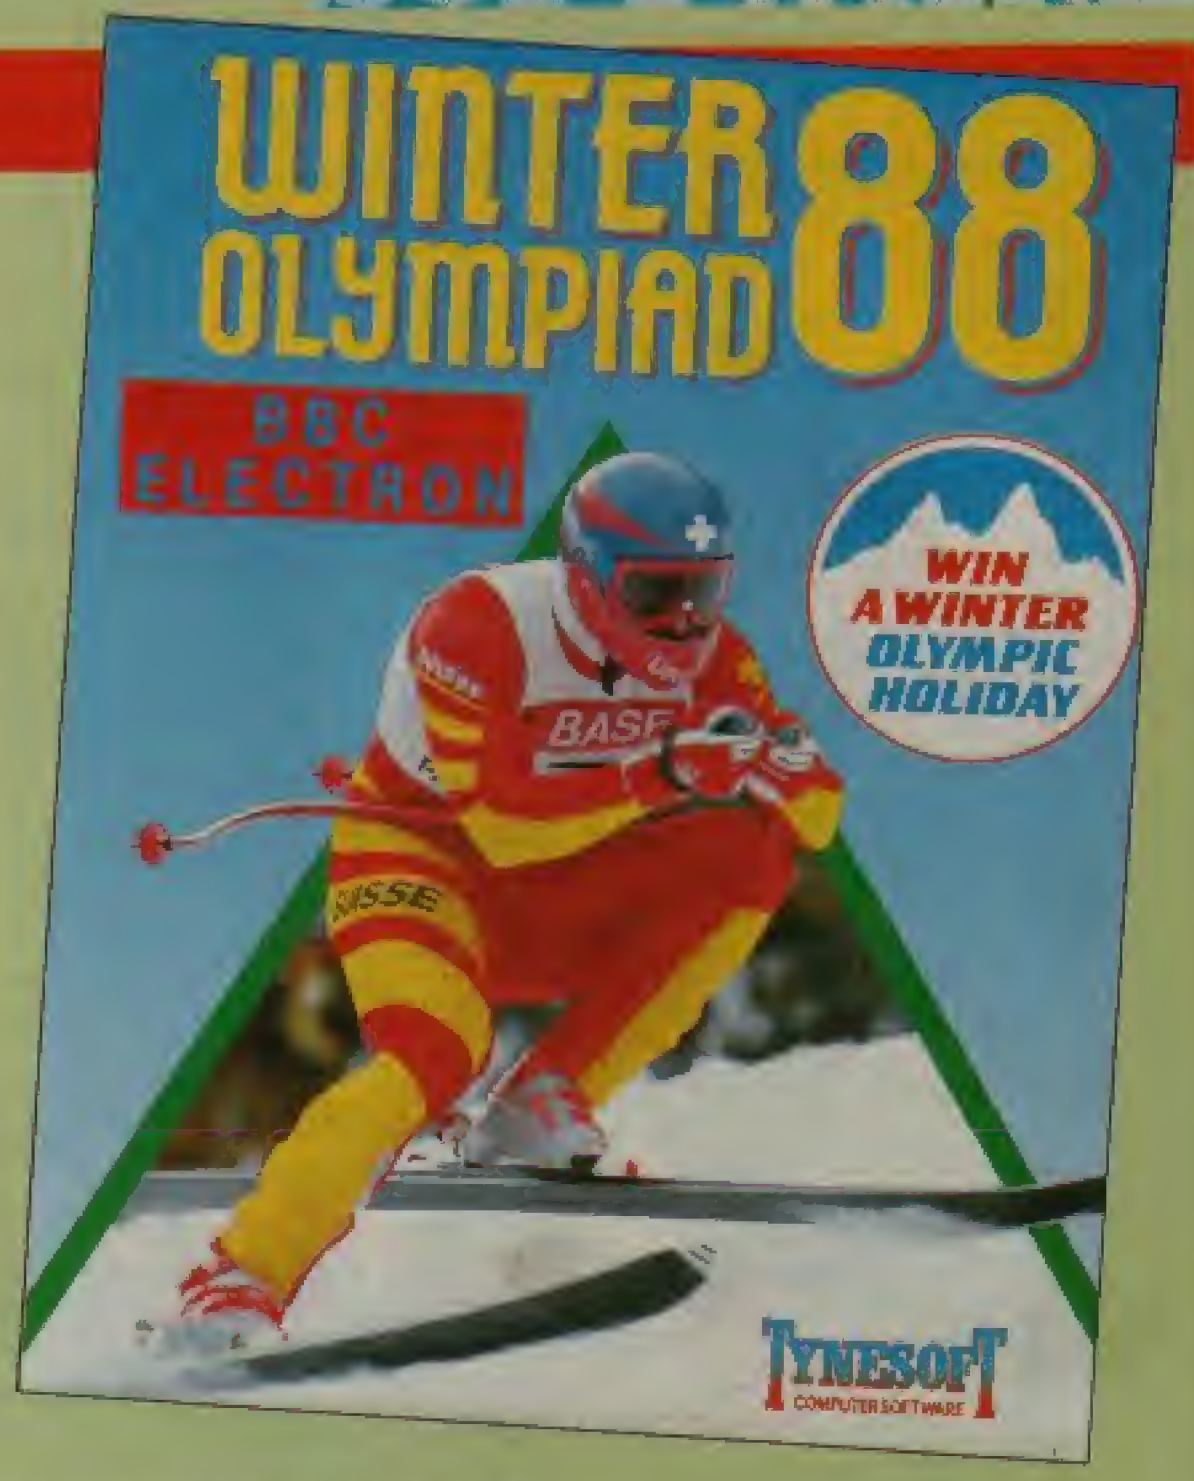
Event number four is the Giant Slalom, in which you rush downhill, guiding your skis between gates made of black and red poles.

This event was a lot more satisfying than the previous one, requiring lightning-fast reflexes to swing your player left and right through the gates.

These must be entered with the red pole to the player's left – your right – and in a panic this can easily be forgotten, resulting in doleful bongs from the computer's speaker as you accu-

*The biathlon*

*The downhill*



mulate penalties. At the end of each heat, any penalties add seconds to your score, and I can tell you that as a consequence mine was consistently worse than the other contestants.

The graphics for this event are very good indeed, accompanied by exhilarating whooshing noises as your skis cut swathes of snow at each turn.

The pole detection seemed very accurate, allowing some very tight squeezes to be accepted. But as soon as a pole is touched, it bends at an angle and you hear a warning tone – a highly addictive section of the game.

The Ski Slalom, event five, is next on the tape. This was quite good fun, and my favourite of the six events. Your viewpoint is from just behind and above your player's head as he plunges through the snow.

Gates appear to the left and right of you, leaving barely enough time to react and slam to one side or the other to clear the poles.

You really do need a lot of skill for this one, as the poles leave little margin for error. Sometimes the gates are so far to one side of you they can't be seen and a large blue arrow suddenly appears, suspended in mid air, which points to either left or right.

It's quite a feeling when you actually manage to respond to one of these warnings in time and shoot straight between the poles at an incredibly tight angle.

Again, good graphics. A mountain range scrolls from side to side in the distance as you manoeuvre. The warning arrows are a nice touch, but I challenge anyone to respond to all of them in time.

Moving on to event six you join the Biathlon. This is the final event on the tape, and as such it is quite a good finale for a very entertaining package. It is really two events in one. You first have to speed-ski up to a row of five targets using the Z and X keys, whereupon the screen expands to show the targets as a rifle-range with five bulls-eyes to hit.

Your rifle is then cocked – another nice touch achieved by clicking the cassette relay on and then off – and a black cross-hair moves down the target.

Pressing the spacebar fires your gun, and if the cross-hair is exactly over the bull at the time, you are rewarded with a satisfying smacking sound and the bull is coloured black. If you miss, you hear an off-key ding, and your miss is marked with a red cross.

This excercise is repeated for all five paper targets before you must again shoulder your rifle and speed off into the snow to find the next cluster of targets.

Overall, Winter Olympiad 88 is an entertaining package, marred only by the slight monotony of some events, and the inability to fast-forward to the section of your choice.

The sound effects are by nature limited, but there is a nice jingle at the end of each event which you may recognise from previous televised Winter Olympics.

As an Electron game, it holds up against even the BBC Micro – I ran the programs on both machines, with no noticeable change in speed.

At £9.95 Winter Olympiad 88 has got to be good value, as you are effectively getting six games for your money, and there is going to be something for everyone in each.

**Chris Nixon**

# EXPERIENCE THE REAL THING!

## WIN A WINTER OLYMPIC HOLIDAY WORTH MORE THAN £2000

## WINTER OLYMPIAD'88

Winter Olympiad'88 is undoubtedly the best winter sports simulation to date. It features the classic winter olympic events; Ski Slalom, Giant Slalom, Two man bob, Ski-Jump, Biathalon and Speed Skating. These have been depicted in a way not seen on any home computer before. The result is a phenomenally realistic and spell-binding game.

Available on the following formats:

# electron user ARCADE CORNER

Compiled by MARTIN REED

MOST *Electron User* readers will know of the Slogger Master Ram board. Many, including Pendragon and I, are proud owners.

For a few months now, Pendragon has been bringing news of the many formerly BBC Micro-only adventures that now run on the Electron with the Master Ram Board, not to mention the new adventures that are being released specifically for the 64k Electron.

As yet, however, I don't know of any arcade games specifically designed for the expanded machine. Think of the amazing possibilities of a full 32k game with Mode 1 or 2 graphics. Such games would rival anything available for the BBC Micro or any other machine. What about two versions – one 32k and one 64k – on the same tape?

This month's pokes come from Justin Tyas from Woodham Ferrers, Essex, Mark Richardson from Barking, Essex, Jason Hassam from Stepney, London, Paul Shackels from Southgate, London, and Troy Helm from Carmarthen, Dyfed.

Share your hints, tips, peeks and pokes with fellow *Electron User* arcade addicts – but please ensure they are all your own work. Send them to:

Arcade Corner
Electron User
Adlington Park
Adlington
Macclesfield
SK10 5NP

### *Gisburne's Castle* – *Martech/Mastertronic*

Alistair Fisher has written in from Thorpe Bay, Essex, with a plea for help with Martech's arcade adventure, Gisburne's Castle. He cannot open the trapdoor or the rusty door or get into the dungeons.

Alistair says he has had the game for nearly two years and is getting desperate. I have hardly played the game myself – perhaps some of our talented readers may be able to help? With the recent re-release of the game on Mastertronic's Ricochet label, I think we may be seeing more of Gisburne's Castle.

### *Omega Orb* – *Audigenic*

Omega Orb features a cheat mode: Logon to a computer and type GROVEL. This gives you an extra life and can be used any time.

### *Soccer Boss* – *Alternative Software*

If football management is not your strong point, here's a cheat for Alternative Software's Soccer Boss. After the game has loaded, press Break, then type:

```
OLD
LIST 32
```

The value of your initial financial resources is held in CA%, and your starting division in DIV%. Change these values to obtain more cash or to start in a higher division.

### *Snapper* – *Acornsoft*

Here's an unusual tip – a cheat for the rom version of Acornsoft's Snapper! Insert the cartridge and switch the machine on. Wait for about a second and press Escape. You should then be able to list the game's Basic loader. Delete line 40 and enter the following line:

```
40 !&84=&90(0)
```

Then type RUN to load the rest of the program.

You will find you are only pursued by the red monster, and that you will be credited with the points of the current bonus fruit every time you pass your starting position, regardless of whether the fruit is actually displayed at the time.

Also, if you eat a power pill and catch the red monster – sending it back to its den – it will not come back out until you begin a new sheet. This allows you to complete the current sheet at your leisure.

### *Tarzan Boy* – *Alligata*

Here's a simple tip for anyone who finds Tarzan Boy a bit slow – just press Break. This switches the sound off and causes the game to speed up. However, this only works once: if you press Break a second time the Tarzan Boy sprite will be corrupted, turning into a series of vertical lines. Be careful.

### *Starship Command* – *Acornsoft*

This short routine for Acornsoft's Starship Command doubles the rate at which your starship's shields are replenished.

```
10 P%=&5700
20 [OPT 2:PHP:PHA
30 LDA#rate:STA &3485
40 PLA:PLP:RTS:]
50 rate=24
60 ?&220=0:?&221=&57
70 *FX 14,4
```

Enter the listing and type RUN. Then chain Starship Command from the beginning as usual.

The value of *rate* can be anywhere between zero (shields replenished slowly) and 255 (very quickly). The default value is 12. Try setting *rate* to 255. You can now simply ram the enemy ships – an appropriate revenge.

### *Spy vs Spy* – *Tynesoft*

Nathan Edmunds has written in with a request for help with Spy vs Spy. He has collected all the objects, but does not know how to put them in the briefcase.

He also wants to know which of them are actually needed to finish the game.

To put an object into the briefcase, you must put the briefcase into the cupboard, safe or filing cabinet and take the object.

Then put the object back where you found it and take the briefcase. The object is now in the case.

Objects in the briefcase show up as flashing symbols on the trapulator. You only need four items – passport, key, plans and money – to leave the embassy and win the game.

# Character building

## The first instalment of a new series by ROBIN NIXON on how to create your own character sets

**OVER the next few months we'll be looking at ways of redefining the Electron's character set, seeing how to create new fonts for Epson-compatible printers and how to get a 40 character screen width in Modes 2 and 5, or even 80 characters in Mode 1.**

This month we'll kick off with Program I, a font designer. It enables you to quickly and simply define and use complete character sets without having to type a single VDU 23 statement.

As you may know, to obtain more than 32 user-defined characters it is usually necessary to "explode" the character set by issuing a *FX20 command.

This can be a bit fiddly and results in the loss of 256 bytes per set of characters. As we need 96 characters to create a complete set, that makes a total 768 bytes of memory required.

There is, however, another way. On a disc-based system we can just about squeeze our character definitions in pages &9, &A and &C of memory.

Tape users will need to use page &B, the function key buffer, in place of &A as this is the cassette input buffer which will be used for loading in the character sets.

So long as we don't try to BPUT or BGET using the cassette filing system, or define more than four evelopes there will be no problems.

Now that we've found somewhere to put our character sets, we need to tell the computer where to find them. This is achieved by altering the locations in page &3 as shown in the panel on the next page.

However, we need only be interested in the following three fonts: 32-63, numbers and punctuation, 64-95, upper case letters and 96-127, lower case letters.

Numbers and punctuation can go in page &9, uppercase letters in page &A (&B for tape users) and lowercase letters in page &C. So to set up the extra user-defined characters we have to change four bytes like this:

```
?&367=&78 (bits 4 5 and 6)
?&368=&9
?&369=&A  (&B for tape)
?&36A=&C
```

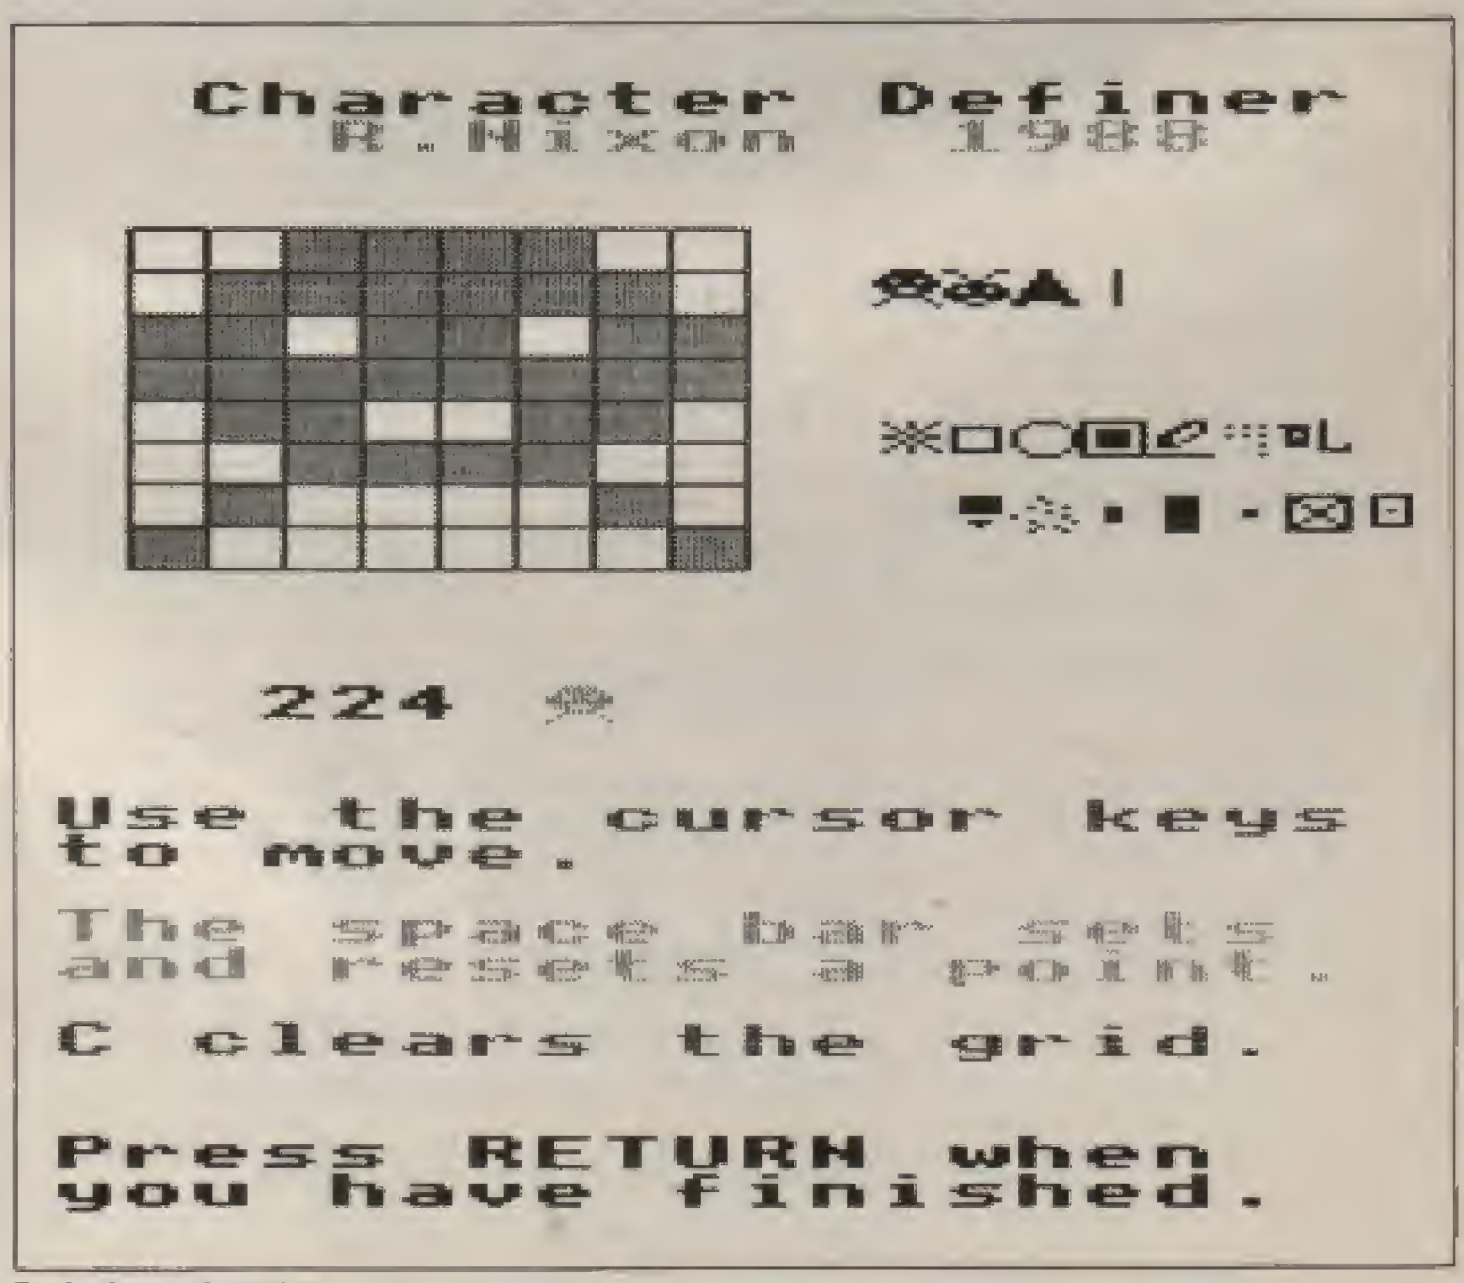
The three bits set in location &367 tell the computer to take the selected fonts from the specified pages in ram rather than the rom look up table. Ok so far, but we still have one problem – no user-defined characters.

Well, this bit's up to you. Using Program I define your three parts of the font and save each with a different filename, such as FONT-N, FONT-U and FONT-L, where N is numerical, U is upper case and L is lower case.

Then type in Program II, changing the filenames in lines 80-100 to those of your new font. If you are using a tape system, don't forget to change the A00 in line 90 to B00 and the ?&369=&A in line 130 to ?&369=&B. You can now merge your programs on to the end with your new font replacing the Electron's standard one.

The character definer can also be used to create your own user-definable characters which need only be loaded in at &C00 saving

*Turn to Page 22 ►*



*Designing a character*

# Programming

◀ From Page 21

you typing VDU 23 statements and making your programs shorter.

● *Next month we'll have a look at printing out the new fonts on a Epson-compatible printer. In the meantime I'd be interested to receive any fonts you design: If there's room, I'll include a printout of the best one in a future article.*

| | |
|---|---|
| **&900-&9FF** | Extra envelope storage area, envelopes 5-16.<br>Speech buffer.<br>RS423 output buffer.<br>Cassette output buffer. |
| **&A00-&AFF** | Cassette input buffer.<br>RS423 input buffer. |
| **&C00-&CFF** | User-defined characters 224-255. |

| | |
|---|---|
| **&367** | The font flag: This byte marks whether a particular set of 32 characters (font) is taken from rom or ram. If a bit is set the corresponding font is located in ram.<br>bit 6 characters 32-63<br>bit 5 characters 64-95<br>bit 4 characters 96-127<br>bit 3 characters 128-159<br>bit 2 characters 160-191<br>bit 1 characters 192-223<br>bit 0 characters 224-255 |
| **&368-&36E** | The font location bytes. These contain the high bytes for the location of each font. A font can only start at the beginning of a page so the low bytes are always 0. |

*The main areas of memory used*

*Program I*

If you want to start doing more with your micro than just playing games, this package is your ideal introduction to the four most popular applications for professional computers. All the programs have been designed for simplicity, so even a child can use them. Yet they include advanced features not yet available on programs costing many times as much!

***Finalist for the Home Software of the Year Award***

BRITISH MICRO COMPUTING AWARDS 1985

***Contains 32 page booklet giving clear, easy-to-follow instructions on all 4 programs***

**Word Processor:** Ideal for writing letters and reports. There is a constant display of both time and word count, plus a words-per-minute display to encourage the budding typist! A unique feature is the double-size text option in both edit and printer mode – perfect for young children and people with poor vision.

**Database:** You use this for storing information, just like an office filing cabinet. Facts you have entered can be quickly retrieved by just keying in a word or part of a word. They can be sorted, replaced, saved for future use or printed out.

**Spreadsheet:** Enables you to use your micro for home accounts or pocket money records. It creates a display of numbers in rows and columns. Continuous updating is possible, and a changed figure can be instantly reflected throughout the rest of the spreadsheet. Your results can be saved, to be used for future updates, or can be fed into its associated program . .

**Graphics:** Part of the spreadsheet section, it lets you draw bar charts, pie charts and histograms to give a graphic presentation of your statistics. Helps to give life and colour to the dullest figures!

☆ Word Processor ☆ Spreadsheet
☆ Database ☆ Graphics

# Now they're all together – in ONE simple package

*Four full-scale programs for an incredible low, low price!* **£5.95** cassette

# RAINBOW

## ROBIN NIXON introduces a colourful computer-aided design utility

**RAINBOW is a powerful graphics program suitable for many drawing applications. It features advanced drag and rounding facilities to help take the rough edges off your designs.**

The program works in Mode 5, thus giving four ink colours. It can draw lines, rectangles, circles and fill enclosed areas. It also provides several brush sizes and shapes and uses five drawing speeds.

After completing your work of art you can save your picture to disc or tape and later reload it.

In fact the only main feature it doesn't have is a screen dump to output the picture to the printer. This is because there are so many different printers and dumps that it was felt logical to leave dumping a saved screen up to you.

Rainbow has been made as easy to operate as possible. You only have to use the cursor keys and spacebar.

All functions are represented at the top and bottom of the screen as icons which can be accessed by moving the cursor to them and pressing the spacebar.

You can see these icons along with an explanation of their functions in Figure I.

At start-up certain icons have been pre-selected: The ink is set to red, the drawing speed is one and the pen has been selected.

On the screen you will see a flashing square box. This is the nib of the pen, brush or other icon you are using.

If you press the spacebar the computer beeps and the ink is turned on. If you then move the cursor, the pen draws on the screen. If you press the spacebar again the computer beeps and the ink is turned off. Once you've typed in the program, try practising with the options.

There are 10 icons at the top of the screen. The first four control the colour of the ink and the next five control the nib's speed.

Speed five is quite slow and so is ideal for intricate design work, as any slips of the nib will result in minimal errors. On the other hand speed one is very fast and is useful for drawing large objects.

The tenth icon is erase. To avoid accessing this function accidentally you must select it twice. When you've finished practising with the top set of icons try out erase.

Now for the bottom 10 icons. First is the pen – the one you have been using until now, unless you've selected another option.

The next icon is scatter. This works in the same way as the pen, but draws a pattern of scattered dots.

The next two icons are the small and large brushes. They work in a similar way to the pen except that the ink comes out in one of two larger sizes.

Icon five at the bottom is line draw. If you take a look at Figure II you'll see that line draw enables you to drag a line around until it is exactly where you want it before placing it on the screen.

When you press the spacebar the computer beeps at a different pitch to tell you it has remembered the position of the nib.

As you move the pen about, a line is dragged until you press the spacebar again, whereupon the line is placed on the screen.

The next icon, rectangle draw, is similar to line draw except that you can drag rectangles around the screen. Figure III shows how this works

Looking at Figure IV you will see that the seventh

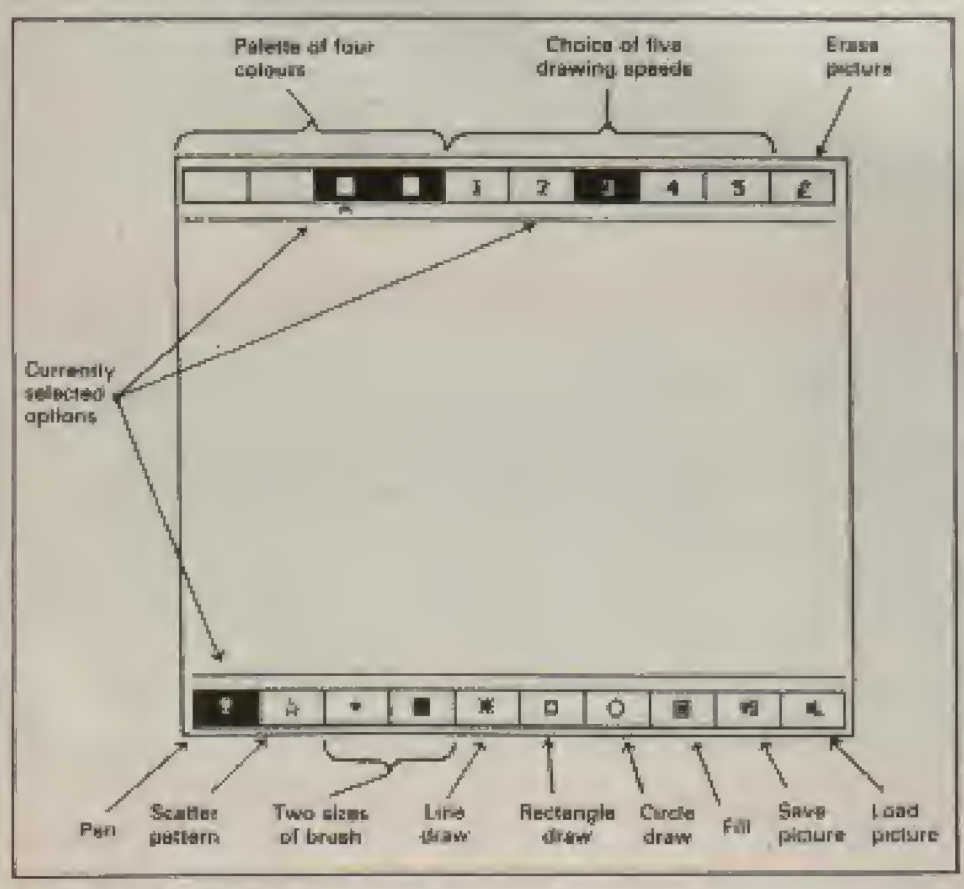

*Figure I: The screen icons*

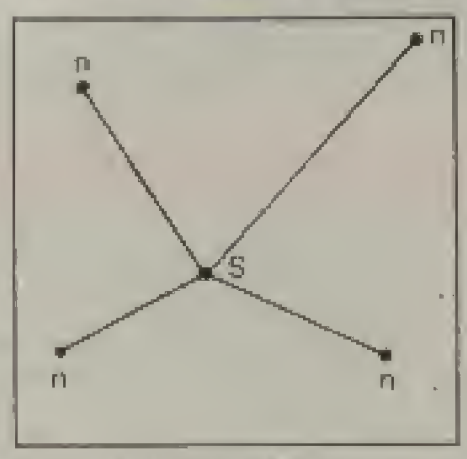

*Figure II: Using rubber-banding to drag lines from start position (S) to Nib position (n)*

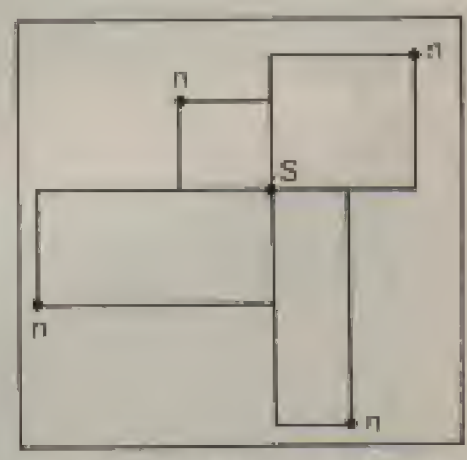

*Figure III: Dragging rectangles from start (S) to Nib position (n)*

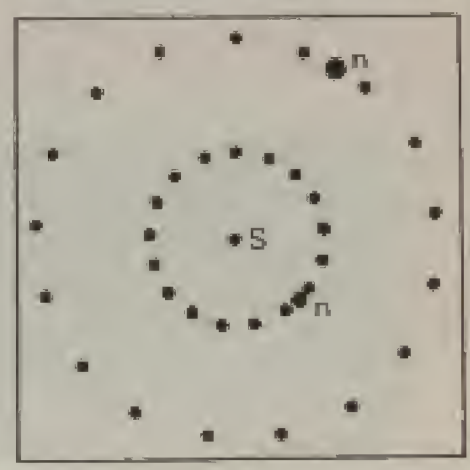

*Figure IV: Dragging a circle's circumference from start position (S) to Nib position (n). Until the circle is drawn on the screen it is represented by a number of dots.*

# More great Electron games

This month we introduce a new volume in our Ten of the Best series – 10 more games to give you many hours of fun and entertainment.

These four packages are crammed with the best games from the last two years of Electron User. As an added bonus a previously unpublished game has been added to each one – stunning machine code masterpieces from our technical wizard, Roland Waddilove.

So give yourself a treat. . . with the most popular games compilations we've ever produced.

ONLY
**£5.95** tape
**£6.95** 3½" disc

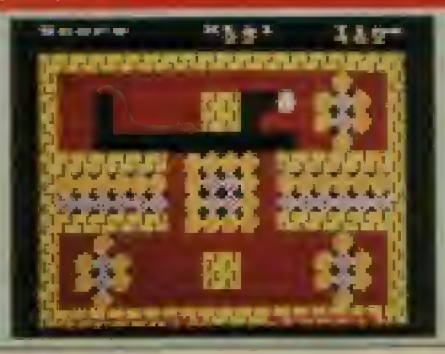
## Volume 1

**Jam Butty:** *Machine code simulation of high drama on a building site.*
**Golf:** *Play a round by yourself, or play against your pals*
**Haunted House:** *Fight against all the odds to get out alive.*
**Space Hike:** *Another classic, Help the spaceman avoid marauding monsters.*
**Parky's Peril:** *Help Parky through an invisible maze, racing against time.*
**Rally Driver:** *All the thrills of high -speed driving with none of the risks.*
**Alphaswap:** *Your letters are in a twist. Can you put them in order.*
**Knockout:** *Fast and furious action as you batter down a brick wall.*
**Money Maze:** *Avoid ghosts and collect coins in an all-action arcade classic.*
**Lunar Lander:** *The traditional computer game specially written for the Electron.*

## Volume 2

**Atom Smash:** *Machine code thrills as you help to save the world from destruction.*
**Bunny Blitz:** *Go egg collecting, but keep away from proliferating rabbits.*
**Castles of Sand:** *Build castles – but beware the rising tide and hungry sandworms.*
**Reaction Timer:** *Test your reactions with this traffic lights simulation.*
**Solitaire:** *The Electron version of the age-old game of logic and patience.*
**Jumper:** *Jump for your life in this exciting arcade action game.*
**Break free:** *Test your wits and reflexes in this popular classic ball game.*
**Code breaker:** *Crack the code in a colourful if frustrating brainteaser.*
**Parachute:** *Save the plunging sky divers from a watery end.*
**Star fighter:** *Attack the bandit ships in this fast-moving 3D punch up.*

## Volume 3



**Rockfall:** *Come diamond mining in this fun packed game with its own screen designer.*
**Karate Warrior:** *Win your black belt in this gruelling test of karate skill.*
**Grand Prix:** *Battle your way into the lead in this tricky racing simulation.*
**Invasion Force:** *Can you survive wave after wave of relentlessly advancing aliens.*
**Grebit:** *Guide the frog across the busy road then across the fast-flowing river!*
**Fruit Worm:** *Steer the worm towards the fruit while avoiding rocks and its ever-growing tail.*
**Manic Mole:** *Watch out for melting platforms and conveyor belts in your quest for jewels.*
**Skremble:** *Fly your fighter fast and low over the landscape to penetrate enemy territory.*
**Mr. Freeze:** *You'll need speed and strategy to reach the ice blocks before they melt away.*
**Paint Roller:** *Steer a speeding roller, run over paint pots but keep clear of the rocks.*

## Volume 4

NEW

**Lunar Invasion:** *Defend the moon from wave after wave of marauding aliens in this superb multi-screen arcade game.*
**Howzat:** *Try not to get caught out in this vivid recreation of a day's test cricket.*
**Snapdragon:** *Enjoy this two-player micro version of the familiar card game.*
**Day at the Races:** *Fancy a flutter? You can bet your shirt in safety in this two-player horse racing game.*
**Reversi:** *Combine cunning and chance as you try to out-think your Electron at this classic board game.*
**Fishing:** *Relax and enjoy a quiet afternoon by a shady brook. You'll regret if you let this one get away.*
**Cavern Capers:** *Escape from the depths of the planet by blasting oil drums and dodging deadly fireballs.*
**Craal:** *Escape from the maze and win the beautiful princess in this superb text adventure.*
**Oxo:** *High strategy meets low cunning in a logic game to strain your brain.*
**Missile Attack** *Defend your city from a missile invasion and save it from certain doom.*

TO ORDER PLEASE USE THE FORM ON PAGE 53

icon, circle, is slightly different from the previous ones.

Once you've pressed the spacebar to register the centre of a circle you will see a series of dots appear in a ring. These spread out as you move the cursor.

The circumference of the circle represented by the dots lies exactly on your new nib position. The dots are used because drawing circles in Basic takes a long time and you would not be able to achieve the real time dragging effect.

The fill icon is a partial fill routine. When you press the spacebar with the fill icon selected, the area underneath is filled in with the current ink.

As this is only a partial fill it may take three or four goes to fill an object entirely.

The last two icons are to save and load pictures. As their names suggest, these options either save or load the picture to or from disc or tape. The picture is saved under the filename PICTURE.

If you are using a tape recorder make sure you have wound the cassette to the correct place when saving or loading as none of the normal messages will be displayed.

# JOYSTICKS— THE COMPLETE SOLUTION

**DELTA 3B SINGLE–BBC B or ELECTRON PLUS 1** **£12.95**
A single joystick that in some ways can act as two. The custom made special "low noise" potentiometers are wired so that it will work as a left hand or right hand joystick. It can even run some programs written for two joysticks and has the fire buttons of both.

**DELTA 3B TWIN–BBC B or ELECTRON PLUS 1** **£19.95**
A direct but improved alternative for the original ACORN joysticks, with 2 joysticks wired to one plug. As with all our joysticks they have the fast action sprung to centre return of the steel shafted nylon covered joystick. The light action makes them ideal to hold and the 3 fire buttons allow left or right-handed use.

**DELTA 3S SINGLE–MASTER COMPACT or ELECTRON FIRST BYTE INTERFACE** **£12.95**
The same light, hand-held, fast, light action of a 3B but fitted with switches for use with a switched joystick interface, such as a First Byte.

**FIRST BYTE INTERFACE** **£19.95**
**PLUS 1 INTERFACE** **£49.95**
**SLOGGER JOYSTICK INTERFACE** **£19.95**
To run a Delta 3S switched joystick on a Plus 1 which runs many of the new Acorn compatible joystick programs.

**SPECIAL OFFERS**
Buy a DELTA 3S and a FIRST BYTE INTERFACE together for **£29.95**
Buy a DELTA 3B SINGLE and PLUS 1 INTERFACE together for **£59.95**
Buy a DELTA 3S and SLOGGER JOYSTICK INTERFACE together for **£29.95**

**NEW !!! DELTA 3SO SINGLE–MASTER COMPACT or ELECTRON FIRST BYTE INTERFACE** **£19.95**
Optical Feed Back. The joystick is fitted with 5 coloured lights to show you exactly when a switch has operated, so you need only move the joystick a minimum amount, and can be certain that you have given a true diagonal signal to the computer.

Available from your dealer or direct from us

# Forecasting sunny days

## JOE PRITCHARD introduces the Electron User weather station

**WE have seen recently that even the professional weather forecasters with all their super computers can't always forecast the weather properly.**

In my household, the cat will accurately tell us what the weather's like. If he won't stir from his chair to go outside, the chances are it's cold, wet or both.

Seriously though, this month we start on some interfaces that will allow us to monitor certain aspects of the weather, so you'll be able to keep a record of weather conditions.

Future articles will detail software, and also a bit of general information about the weather. You'll also find that the circuits we consider will be of use in other applications as well, so even if you're not a budding meteorologist, read on.

The first circuit we'll build is for a thermometer – an instrument that not only allows us to measure the current temperature, but with suitable software will also give us a maximum and minimum. It will automatically record the highest and lowest temperatures recorded since the computer was turned on.

The temperature sensor circuit is based upon the differential amplifier we looked at last month. I used a silicon diode for the temperature sensor, and the circuit is shown in Figure I.

The preset resistor VR1, is a bit like the potentiometer we first met in part four of this series. It's a component whose electrical resistance we can vary, though for a preset resistor we use a screwdriver or something similar to adjust the resistance.

Presets are used where we need to adjust a circuit very infrequently. In this case, we use the preset to adjust the zero degrees C reading for each thermometer to be the same.

The amplifier used is the useful little CA3140. As we mentioned last month, unlike most operational amplifiers, the 3140 is quite happy to run off +5V, without a –5 volt supply. This means we can power the circuit directly from the Plus 1.

It doesn't take very much current, so we won't be in danger of overloading the Electron's power supply.

In this circuit the resistor values used are quite important as they set the gain, and hence the behaviour, of the circuit. Stick to the values given, and use five per cent tolerance components if at all possible.

Ok, let's start building. A piece of stripboard is used, and in addition to the parts on the circuit diagram you'll need a socket for the operational amplifier.

Apart from cutting out the risk of damage while soldering, it allows you to get the op amp out of the board and use it for other projects if you need to.

The socket required is called an 8-pin DIL socket and is available from most electronic component stockists. In addition, you'll need a 3.5mm jack plug and socket for the temperature probe. (Figure II.)

Eventually we'll be putting all the weather monitoring circuits into one box, so for the time being we'll leave them uncased.

The layout of the stripboard is shown in Figure III, where as usual, X marks the tracks which need to be cut.

Solder in the wire links first, followed by the DIL socket, then the resistors.

Now check everything, especially the track breaks and the soldering below the socket. It's surprisingly easy to put a blob of solder across two tracks.

Finally, build the temperature sensor. Take care to get the diode the right way around. If you're quite sure all is well, you can plug in the operational amplifier.

Turn off the Electron and connect the circuit to the Plus 1 analogue port.

The circuit is connected to a terminal block by wires which are pushed into the terminal block holes and then the screws tightened up. At this point, we can plug in the temperature sensor.

Turn on the Electron. If all is well the computer will behave normally. Put your finger on the operational amplifier chip. It shouldn't be hot. If it is, turn the micro off and check your wiring.

Now for the fun part. Using Program I, adjust the preset until a value of about 150 is displayed on the screen:

```
 5 REM Program I
10 REPEAT
20 PRINTTAB(10,10)    ;FN
adval;
30 UNTIL FALSE
40 :
50 DEFFNadval=(INT(ADVAL(1
))/256)
```

Now hold the diode end of the temperature probe between your fingers. The reading should gradually increase as the temperature of the probe rises.

Then let the diode cool down – or help it by putting it in the fridge or freezer.

*Turn to Page 30 ▶*

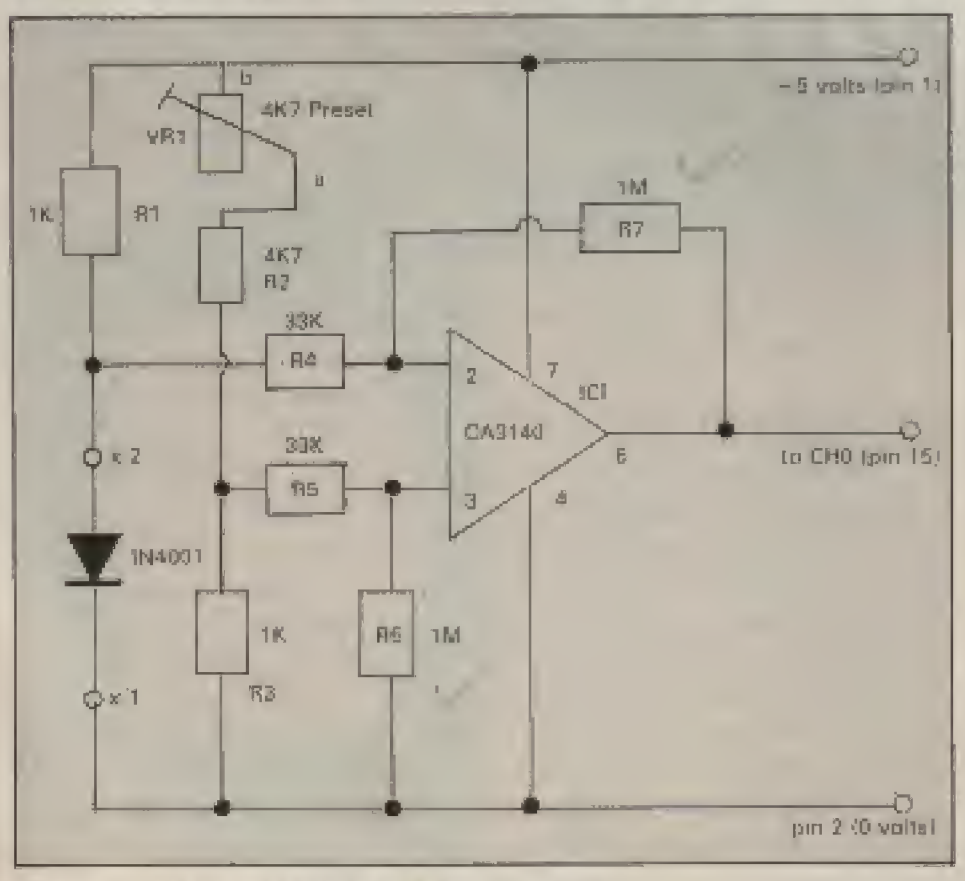

*Figure I: The temperature sensing circuit*

◀ From Page 29

You should see the reading fall.

If this occurs, congratulations, you have a working thermometer. If not, check the wiring.

The easiest mistake to make is the diode connection. Check it's the right way round. If it is, check that the operational amplifier is in the socket the right way around, and check all your connections again.

I decided that we should try and cover a temperature range from a little below zero degrees Celcius to around 40 degrees. This will cover most situations, assuming Britain doesn't suddenly go tropical or start an ice age.

The first point to mark is the zero point. Keep the program running and mix some ice cubes and cold water. Let them stand for a while, and while there is still solid ice in the water pop the temperature probe in (waterproof it first with tape!).

Give it a quick stir, then leave it for five minutes to allow the probe to get to the surrounding water temperature.

Adjust the preset to get a reading of about 10 and record this somewhere. Call this value *temp0*.

You can use either a small screwdriver to adjust the preset or a filed-down knitting needle or piece of plastic rod.

The advantages of using plastic or any other nonconductor to adjust this component are that no variation of the signal due to the electrical field picked up by your body is noted.

If you use a jeweller's screwdriver, the value returned by FNadval will flicker until you remove your hand.

This adjustment should be made carefully, as a small movement on the preset causes a relatively large change on the reading returned.

Now you'll need a normal thermometer and some warm water from the tap. Put the probe in the warm water – which should be around 35 degrees C – and again allow it to reach the water temperature.

Now record the reading taken on the thermometer, calling this value *temp*, and the reading displayed on the micro, call this *temp40*.

If the value displayed is above 255 either cool the water slightly or decrease the sensitivity of the thermometer.

Because the diode responds to temperature changes in a predictable fashion, we can now write a function to convert the reading returned by FNadval to a temperature.

What we need to do now is work out the relationship between the displayed value – between zero and 255 – and the temperature. So, first of all, calculate the following:

```
counts per degree = temp/(t
emp40-temp0)
```

Here we're simply using the difference between the readings obtained at zero and *temp* degrees C to calculate the number of ADC counts returned by FNadval for a single degree.

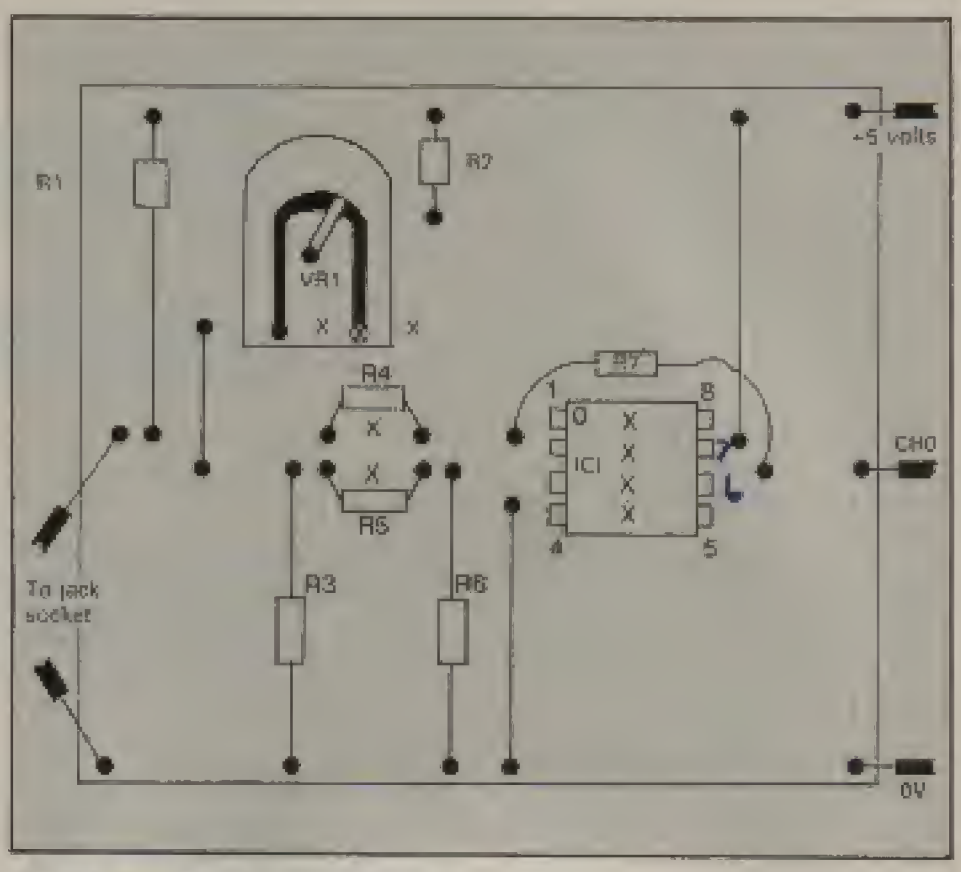

*Figure III: Layout of the circuit*

Now, we can use this to convert any reading from FNadval in the range zero to 255 into a temperature in degrees C. The formula is:

```
temperature = (reading-temp
0)/counts per degree
```

We need to subtract *temp0* from the FNadval reading returned because the circuit wasn't set to return a value of zero for zero degrees C.

As a worked example, one of my prototypes was set to record eight at zero. At 38 degrees a value of 252 was returned. Therefore:

```
counts per degree = (252-8)/38
                  = 6.4
```

Assume now, that we have a reading from FNadval of 200. What is the temperature? Well, we simply say:

```
temp = (200-8)/6.4
temp = 30
```

Program II is a short listing to return the correct temperature. You'll need to change the values of *counts-per-degree* and *temp0* to suit your own circuit.

If you need to vary the range of temperatures covered by this thermometer, then decrease the values of the 33k resistors connected to pins 2 and 3 of the CA3140.

```
   5REM PROGRAM I1
  10 ?&70=&20209
  20 REPEAT
  30 PRINTTAB(10,10)" ";f
Ntemperature;   "
  40 UNTIL FALSE
  50 :
  60 DEFFNadval
  70 =?&70+(ADVAL(1)/256)
  80 DEFFNtemperature
  90 counts_per_degree=6.4
 100 temp0=17
 110 =(FNadval-temp0)/coun
ts_per_degree
```

This will decrease the gain of the amplifier and so increase the range of temperature covered, by virtue of the fact that a larger change in temperature will be needed to get a similar change in value returned by FNadval.

Calibration is just the same. If you want to experiment, try a value of 47k for each resistor. However, it's important to remember that both resistors must be the same value – if you change one, you must change the other as well.

● *In the next instalment of the* Electron User *weather station, I'll detail some software for the thermometer, and also outline suitable housings for the diode probe in the garden. We'll also look at ways of measuring humidity.*

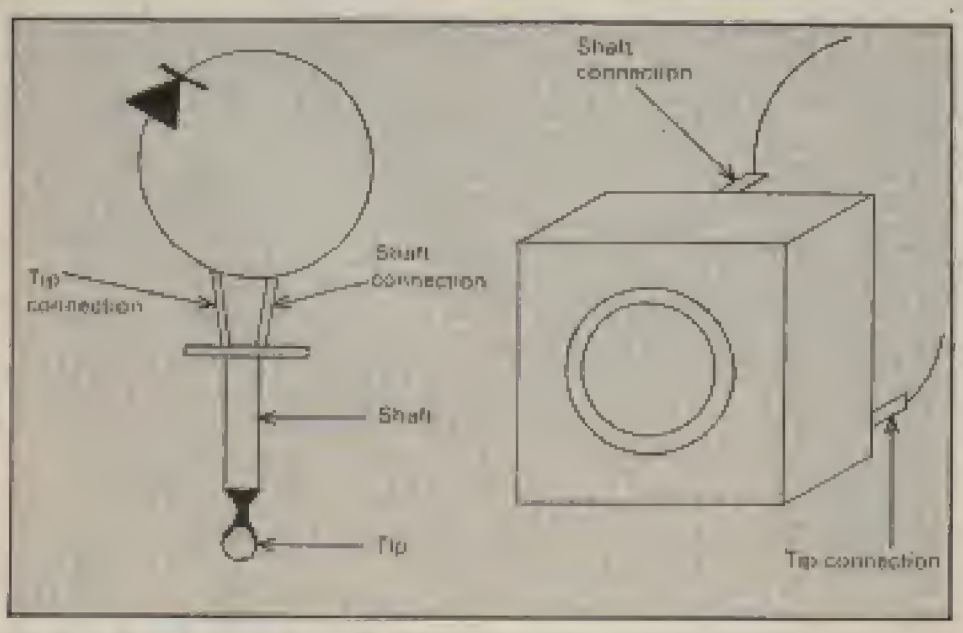

*Figure II: 3.5mm jack socket*

# Experience the thrills of real-life adventuring

**ELECTRON & BBC MICRO USER SHOW**

**...at the Renold Building, UMIST, Sackville Street, Manchester**

**10am-6pm Friday March 18**
**10am-6pm Saturday March 19**
**10am-4pm Sunday March 20**

Of course you'll find the very latest software and peripherals for the complete Acorn range at the Electron & BBC Micro User Show. But there'll also be an exciting bonus:

***Your personal passport to the fascinating world of adventuring!***

- ★ Take part in real-life adventures and fight sequences under the expert guidance of Britain's top role-playing specialists.
- ★ Join in a tantalising treasure hunt for the young and young at heart.
- ★ Find solutions to all those vexing puzzles at our Adventure Advice Centre.
- ★ Take home prizes of the most popular adventure games for the BBC Micro and Electron.

***It all adds up to a fantastic day-out for all the family!***

**IT'S SO EASY TO GET THERE!**

**BY CAR...** AA signposting and ample car parking space nearby

**BY COACH...** Chorlton Street Station only a short walk away

**BY RAIL...** 300 yards from Piccadilly railway station

*...and every advance ticket comes complete with a detailed map.*

**Avoid the queues! Get your ticket in advance – and SAVE £1 A HEAD!**

## YOUR ADVANCE TICKET ORDER

Admission at door:
£3 (adults),
£2 (under 16s)

*Advance ticket orders must be received by Wednesday, March 9, 1988.*

**Renold Building**
**Sackville Street**
**Manchester**
**March 18-20, 1988**

*Please supply:*

# Let's bring your screen to life

## Create animated characters with ROLAND WADDILOVE's easy-to-use sprite designer

**LOOKING at the latest arcade games released by the software houses, you may wonder how they produce such amazing animated sprite-like characters.**

The days of designing sprites on scraps of paper have long gone, and now all graphic artists and programmers have an array of tools and utilities they can call on to make the process much easier.

I first introduced the subject of sprites two and a half years ago in the July 1985 issue of *Electron User*. Since then we have had many requests for more information on this complex programming task.

In this article I'll present a sprite designer and next month we'll see how to print, move and animate our sprites on the screen.

Your first task is to enter and save the designer – the listing accompanying this article. Once this is done you can create some sprites for next month's machine code routines to manipulate.

When the designer is run you'll be presented with the working screen. This shows the sprites you are working on, the current pen colour, pen status, sprite number and large, magnified copy of the current sprite. Figure 1 shows what the screen looks like during an editing session and clearly indicates the position of all the sprites, along with the designer's status.

When you first run the program you won't have any sprites on the screen, so let's create some.

All your drawing is carried out on the large magnified sprite in the centre of the screen. You can move the cursor using the cursor keys, set a pixel by pressing Copy and delete one by pressing Delete.

At the moment the pen is up, so you can freely move the cursor round the screen without drawing anything. Press P to put the pen down and move the cursor around – you'll see that it now leaves a trail in the current pen colour.

This mode is useful for painting large areas of the sprite. One point to watch out for though – you can't delete anything by pressing Delete with the pen down as it draws the point again immediately you've deleted it. Either lift the pen up by pressing P again or select the background colour for the pen.

The currently selected pen colour can be changed by tapping the C key. All subsequent plotting with Copy or drawing with the pen down will be in the colour indicated.

You can fill the four available pens with different inks – equivalent to VDU 19 in Basic – by pressing I. You'll first be asked to input the pen number, followed by the new ink, 0-15.

If you've been experimenting with the commands so far you'll have noticed that whatever you draw in the large editing box is also repeated on a small scale in the top left corner of the screen. This is the sprite you are designing real-size.

You can work on up to four at any one time so let's leave sprite zero, the default one, and create sprite one. Press number 1 and after a slight delay you'll be presented with a clean editing box.

Now design a new sprite.

*Designing a sprite*

| | |
|---|---|
| **Cursor keys** | Move the cursor. |
| **0-3** | Select a sprite. |
| **Shift+0-3** | Copy the current sprite to 0-3. |
| **AZ<>** | Scroll the sprite up, down, left and right. |
| **P** | Pen up or down. |
| **Copy** | Set a pixel. |
| **Delete** | Delete a pixel. |
| **S** | Save current sprite. |
| **L** | Load current sprite. |
| **C** | Select pen colour. |
| **I** | Select ink (VDU 19). |
| **N** | New sprite. |

At any time you can press 0 to go back to the first sprite and 1 again to edit the second one.

When designing animated sprites with say, four frame animation, the frames are often very similar and usually there are just one or two changes each time.

To save time and effort, the current sprite you are working on can be copied to any other sprite by pressing Shift+0–4. If you are still working on sprite one press Shift+2 and it will be copied to sprite two. Don't forget you are still working on sprite one – if you want to work on this new sprite frame you'll have to press 2.

If at any time, you wish to completely erase a sprite and start all over again press N – New. Once this is done you can't get it back again so take care. Remember though, you can copy the current sprite to another one for safekeeping before erasing it.

All that remains is loading and saving. Press S to save the current sprite. Now use the cursor keys to enclose the portion of the sprite you wish to save – you don't need to save all of it. Press Return to confirm and then enter the filename at the prompt.

It's always best to position the sprite in the top left corner of the editing box before saving it, otherwise you'll also be saving a lot of empty space. So before pressing S, (in fact, you can position it at any time) you can move it using <, >, * and ? to scroll it around the editing box.

Loading is much simpler – all you need to do is press L and enter the filename.

These commands always act on just the currently selected sprite, so first press 0-3 to select the one to load or save before pressing S or L.

Take care when inputting the filename as an error may cause the program to stop and display an error message, all you're work will then be lost. You can abort the command by just pressing Return when prompted for the filename.

● *That just about covers all the designer's commands. Table 1 gives a brief summary. Your task now is to create four sprites for next month, when I'll present a machine code sprite print routine.*

# The Life Of Repton

REPTON AS A BABY

REPTON AT SCHOOL

REPTON AS A TEENAGER

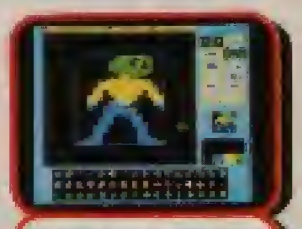
REPTON AT WORK

REPTON AS AN OLD MAN

Repton fans have begged, cajoled and pleaded with us to release another set of screens for our Repton 3 game. How could we refuse? Our lovable hero returns again to star in 40 new screens that vividly depict Repton's life-story.

The Five Ages of Repton:— At first we see Repton as a baby: a mewling infant surrounded by teddy-bears, humpy-dumptys, and aggressive clockwork toy-soldiers. Then Repton is a whining school-boy, creeping like snail unwillingly to school, with his pens, his calculator, and a bundle of homework. And then Repton during his teenage years becomes a spikey-haired punk armed with a ghetto-blaster and a collection of records. Then Repton goes to work: we see a harried office-manager amidst computers, photocopiers, and endless cups of coffee. Last scene of all, that ends this strange eventful history, is Repton as an old-age pensioner searching for his false-teeth, his spectacles, his "pint of stout", and his well-polished war-medals.

THE SCREEN EDITOR



THE CHARACTER EDITOR

**Each copy of The Life Of Repton includes:**
● the Repton 3 main program ● the Repton 3 editor and ● the 40 new game screens

| | | | |
|---|---|---|---|
| BBC Micro Cassette | £6.95 | Acorn Electron Cassette | £6.95 |
| BBC Micro 5¼" Disc | £7.95 | Acorn Electron 5¼" Disc | £7.95 |
| BBC Master Compact 3½" Disc | £9.95 | | |

**(Compatible with the BBC B, B+ and Master Series computers).**
The screen pictures show the BBC Micro version of the game

## PRIZE COMPETITION

If you complete all 40 screens of The Life of Repton, you can enter our competition. Prizes include £200 in cash, with Repton mugs, badges, pens and certificates for runners-up.

Closing Date: 30th June 1988.

SUPERIOR SOFTWARE Limited

ACORNSOFT

Please make all cheques payable to "Superior Software Ltd".

QUAL-SOFT

# WORLD OF SOCCER

Sports simulations

**ARE YOU A POTENTIAL 1st DIVISION MANAGER?**
**ARE YOU A POTENTIAL ENGLAND MANAGER?**

Football management is not a mental arithmetic exercise. Deciding whether a skill level of 6 is a better choice than a skill level of 4 has nothing to do with a knowledge of soccer. Football management is about judgement; YOUR JUDGEMENT! Judgement about a players skills. Judgement of how skills combine to make a successful team. And judgement of the performance of the team on the field of play. Our "WORLD OF SOCCER" games are not so much computer games as computer SIMULATIONS of the world of the soccer manager.

**DARE YOU TEST YOURSELF?**

## SOCCER SUPREMO

# MATHEW O'DONNELL presents a clever game of navigation in deepest space

**EXPLORE the reaches of unknown space in this superb arcade simulation of galactic flight.**

Beyond the depths of the Crab nebula, in the darkness of Teinazures gate, lie the Straits of Magellan – an uncharted region of space spanning an unknown distance.

In the ancient scriptures of your planet it is written that a rich and profitable trading route once spanned the length of the strait, joining the moons of Andromeda with the shoulder of Orion.

Many thousands of years ago however, during a terrible war, an entire planet was destroyed and now leaves a legacy of deadly asteroids floating in the narrow passageway of the strait.

The supreme council assembles and calls in you, Sebastian Jones, their finest star pilot and navigator extraordinaire.

His eminence, the Katarn explains that a priceless religious artefact, the Orb of Wisdom, has been stolen from the great temple.

The traitor has escaped along the Straits of Magellan, presumed to be heading for Rigel.

Although you've never held much store by antiquities in the past, the offer of a hefty purse and instant fame appeals to you immediately.

Dare you venture into the most treacherous region of space to recover the Orb? Only you will know as you play Navigator.

The object of the game is to get from the top left of each screen to the exit gate at the bottom right. This is achieved by moving left and right through the obstacles using the thrust key (Shift) to control your speed.

Be careful not to thrust in any direction for too long, because due to inertia the spacecraft keeps moving for a long time.

Crashing into the walls of the Straits or the asteroids is fatal, and you only have five lives.

And even though Navigator is less than 2.5k long it has no less than six mazes and a virtually infinite number of asteroid-infested screens.

Mazes appear on the even numbered levels up to level 12, each more challenging than the last.

This remarkable game demonstrates the real power of Electron Basic. ■

# SUPER DIGGA

**Get your spade arm into action with STEVEN MARTIN's super maze game**

**THE forces of evil have once more transported an unwitting mortal down to their fiendish underground maze to satisfy some terrible purpose.**

You are that mortal, and before you can escape to breathe fresh air again, your intellect, speed and endurance will be stretched to breaking point.

In this all-action machine code game, you are faced with the task of collecting every diamond buried in the maze with you before ascending to the next highest cave, and – hopefully – eventual freedom.

This is no simple task, as you are surrounded by vicious maze munchers who take great umbrage at the thought of their precious booty being lifted from under their yellow noses.

To make matters worse, the maze is full of magic mushrooms just itching to brush their fungal feelers against you and sting you into oblivion.

And as if that weren't enough, some joker has poured a truckful of rocks down the cave. Negotiating your way past these while being pursued by a frenzied monster certainly raises the blood pressure.

It's not all plain sailing for the monsters, though, as you can decide at the start how fast you want everything to move through the maze.

You control your small figure from the keyboard and can pause the action at any time by pressing P.

Your score, together with the number of remaining diamonds and lives, is shown below the maze. Each new cave contains more diamonds than the last – and the monsters get smarter.

# WHAT PRICE QUALITY?
# WHAT PRICE COMPATIBILITY?

SLOGGER

**To quote a well known phrase, "You only get what you pay for"**

This we feel sums up SLOGGERS pricing policy. Our goods may not always be the cheapest, but the products are most certainly the best.

## THE PEGASUS 400 DISK DRIVE SYSTEM

Using only top quality components, the system comprises of:

The SLOGGER 40/80 Track double sided 5.25" Disk Drive which maintains

* 400k storage per disk, built in power supply.
* Manufacturers (NEC/TEAC) 1 year guarantee.
* Internal Power Supply unit (built to BS 415).
* Compatibility with the inexpensive (yet most reliable) 5.25" disks.
* Reliability at 3 m/s step rate (four times faster than some drives).

**The SLOGGER PEGASUS Disk Interface which boasts**

* Excellent Computer Aided Design (CAD) production
* Acorn approved design and standard WD1770 floppy disk controller
* NEW Type-Ahead facility when used with Master RAM Board
* READ/WRITE Shadow Screen when used with Master RAM Board
* 90 page documentation usually provided as a separate purchase
* Compatibility with the ACP ADFS Version 1.1, which offers a total 640k when used with SLOGGERS 5.25" Disk Drive

The SLOGGER SEDFS ROM, about which the Electron User magazine enthused

"I can recommend SEDFS unreservedly"
"Anyone considering upgrading to disk"
"SEDFS is the logical choice"

The quality of SEDFS speaks for itself, unlike other filing systems it offers

* No loss of Electron memory, PAGE=&E00 (not &1D00)

Full Acorn DFS (BBC Model B and MASTER SERIES) compatibility

* All utilities built in, requires no additional menacing utility disk

**PEGASUS 400 (Including Interface) .....£149.50 (inc VAT)**
**PEGASUS INTERFACE (Only) .....£74.95 (inc VAT)**

## MASTER RAM BOARD

### Upgrade your Electron to a 64K Machine using 32K of STATIC RAM

* Fits inside the Acorn Electron, uses no cartridge ports.
* Compatible with ALL reliable Electron hardware (except TURBO DRIVER).
* Compatible with ALL Electron software, switching between 64K mode, TURBO mode (yes. . . the TURBO DRIVER IS BUILT IN), and normal mode.
* For correctly written software, HIMEM is ALWAYS AT 8000 in 64K mode so leaving 28000 bytes for BASIC or WORD PROCESSING in ALL screen modes.
* Doubles the speed of Word Processing.
* Upto 300% speed increase for games.
* Additional 12K for use as Printer Buffer with Expansion ROM 2.0.
* Installation Service (See Details below) for those not confident of desoldering the 6502 Microprocessor

**NEW FEATURES**

* 64K Mode fully compatible with 98% of Level 9 BBC Adventure games.
* NEW OS 2.1 – PLAY ACORNSOFT'S ELITE WITH SLOGGERS JOYSTICK INTERFACE.

"I can thoroughly recommend it"
*Electron User 1987*

**Master RAM Board Kit – code MR2 – Now Only £49.95**

## INSTALLATION SERVICE

Driver AND RETURN IT WITHIN 7 DAYS OF RECEIPT.

* Includes Postage paid BOTH WAYS (using FREEPOST) and 1 YEARS GUARANTEE.

**Order MR1 – Master RAM Board Installed – only £59.95**
**or TD1 – Elk Turbo Driver Installed – only £39.95**

Please note . . . if you own a PLUS 1, please send it with your Electron to be tested to ensure reliability at high speed.

# ROMBOX PLUS

**SLOGGER's answer to the PLUS 1**

Q. Why not buy the Acorn Plus 1?
A. Because "Excellent though the Plus 1 is, I think there is still room for improvement" said the Electron User Magazine.

**The ROMBOX PLUS has this improved specification:**

1. Four ROM/RAM sockets to free the cartridge slots for more important add-ons. Each socket can take the usual 8K/16K ROMs but can also take 16K RAMS offering a staggering 64K SIDEWAYS RAM
2. The PLUS1 Cartridge slots.
3. The PLUS1 centronics printer port.
4. The Expansion ROM 2.0
5. Switched Joystick interface available.
6. Analogue Joystick interface under development.

**Still Only £54.95**

# 64k ACORN ELECTRONS

THESE ELECTRONS ARE FITTED WITH THE MASTER RAMBOARD AND ARE FULLY TESTED AND GUARANTEED WHEN PURCHASED DIRECT FROM SLOGGER

**64k ELECTRON**
**(Switchable)**
**£99.00**

# EXPANSION ROM 2.0

**for ROMBOX PLUS or PLUS 1**

- Supports Printer Buffer with 8K/16K sideways RAM or 12K with MASTER RAM BOARD.
- RSAVE command to save ROM images to tape or disc.
- RLOAD command to load Sideways RAM with a ROM image.
- ROMS command to display ROM/RAM in system
- JOYSTICK command for the SLOGGER Joystick Interface
- Allows cassette loading in high resolution.
- Supports all standard functions (Printer, ADC, RS423)
- Simply fits into internal ROM socket.

"There is room for improvement in the operating system. No doubt this was the idea behind Expansion 2" *Electron User, July 87*

**Only £11.95**

**(£5 if purchased with 32K SIDEWAYS RAM or JOYSTICK INTERFACE)**

# TAPE TO DISK ROMS VERSION 2

- Transfer the majority of Tape programs to disk
- Acornsoft, Superior and Micropower no problem
- Compatible with programs copied using Version 1
- More successful than ever before

T2P3 for the Acorn Plus 3
T2CU for the Cumana DFS
T2P4 for AP4 and EOO DFS
T2SD for the Solidisk DFS
T2SEDFS for the SEDFS
T2PEG400 for Pegasus 400

**ONLY £24.95**

- Upgrade 1-2 only £5 with original ROM

# JOYSTICK INTERFACE

**for ROMBOX PLUS or ACORN PLUS 1**

- Uses inexpensive ATARI-type joysticks
- Compatible with ALL Tape and Disk systems.
- Emulation of keys by Expansion ROM 2.0
- Can be used with well written games either WITH OR WITHOUT A JOYSTICK OPTION

"The ultimate Joystick Interface" *A&B July 87*

"Well worth saving up for, I can recommend it to all Arcade Addicts" *Electron User May 87*

**Only £14.95**

- Requires Electron Expansion 2.0 Only £5 with this unit

## JOYSTICKS

Switched Joysticks for the Slogger Joystick Interface

| | |
|---|---|
| Quickshot I | £4.00 |
| Quickshot II | £5.00 |

# 32K SIDEWAYS RAM CARTRIDGE

**for ROMBOX PLUS or PLUS 1**

- Ever popular on the BBC
- Best used with EXP ROM 2.0

(1) Save ROM backups for loading into Sideways Ram.
(2) Set up a 16k Print Buffer

- Splits as 2x16k pages VIEW and VIEWSHEET in one slot!!
- Write protect option . . . prevents corruption of software.

"A very powerful piece of hardware" *Electron User July 87*

**ONLY £34.50**
(£39.50 with EXP ROM 2.0)

# SLOGGER EPROM CARTRIDGE

- Carries TWO 8K/16K ROM/EPROM software
- Compatible with PLUS 1, ROMBOX PLUS and BBC Master.
- Simply plugs into cartridge slot

**£10.00 for a limited period**

# ROM SOFTWARE

| | |
|---|---|
| STARSTORE 2 | £29.95 |
| SEDFS upgrade ROM for CUMANA owners | £24.95 |

# * BARGAIN CORNER *

# Get knitting on your micro with

# Knitwear Designer

**Now you can use your BBC Micro or Electron to design perfectly-fitting knitwear – then print out the complete pattern.**

It's the biggest development since the home knitting machine – and it's so simple to use. Now anyone can use a computer to design knitwear to individual measurements and then produce row-by-row knitting instructions on the printer.

YOU CAN:

- Work with any yarn, from fine cottons to chunky wools
- Enter your natural tension and the pattern adjusts to the way you knit
- Select from three preset patterns – Raglan sleeve, drop and square shoulder
- Use the Freehand program to produce custom designs

Say goodbye to badly-fitting home knitting. With one of the five programs included in the package, and using the clearly written manual, you can produce perfect results every time.

*The program itself produces a plain knit, leaving you to use your own favourite stitch pattern, such as the Fair Isle design featured here.*

To order please turn to the form on Page 53

**£8.95**
**Cassette**

Also available on disc for use on the Advanced Plus 4 and Slogger SEDFS.

**£9.95**
**5¼" disc**

Exploring printers Part 2

# Printing in overdrive

**JULIA FORESTER runs a set of benchtests in Part 2 of her printer series for beginners**

**NO ONE could accuse a modern printer of being slow, yet in days not-so long past, when daisy-wheels and golf balls were more common, printing was a slow and laborious task.**

And before monitors became commonplace it used to be the only form of display. Unbelievable as it may now seem, computer programmers and operators had to work from paper printouts.

Thankfully, the days of the rattling teletype are little more than a faded memory – now we have to make do with luxuries like televisions, high-resolution colour monitors and so on.

Even so, there are still times when a hard copy of our work is required: The obvious instance is when we're sending a letter.

The document is prepared and edited in the computer, but unless we're able to use electronic mail it will have to be typed out on paper and sent by normal means: This involves using a printer.

Another case is listing programs. The monitor can only display a few lines at a time, 32 being the maximum on the Electron. However, when debugging our own programs we may need to look at areas many tens of lines apart.

This is where the hard copy is extremely useful. It's much easier to thumb through a few sheets of paper than to wade through line after line of screen output.

The Electron can transfer data at very high speed, but printers can only output it considerably more slowly. So, when the printer is busy, the computer has to wait before it sends more information – in effect the computer has to stop and wait for the printer to catch up.

To help overcome this, the Electron has a printer buffer built in. This is organised as a FIFO queue – take a look at the accompanying panel for an explanation.

Characters wait in the buffer until the printer sends a signal to inform the computer it's ready to receive more data. On the standard Electron the buffer is 63 characters long. However, there are addons such as ACP's 256k ram packs which can be configured as partial printer buffers.

Some printers have their own, modestly sized buffers and larger capacity external devices are available. One, the MicroStuffer, reviewed in the September 1987 issue of *Electron User*, provides a massive 64k buffer.

Such units store characters from the parallel port as fast as the computer can send them, leaving the computer free to carry on very quickly, and characters are output to the printer at the printer's speed. The problem with all such devices is that they don't come cheap.

In the final reckoning though, the speed of the printout is governed by the speed of the printer itself. Individual models vary considerably in how fast they operate. Manufacturers provide a lot of impressive sounding figures, but these can rarely be easily compared.

In fact, a lot of things govern how fast a printer is, not just the speed of its printing. For instance, there's the carriage speed – how fast the print head travels, and line feed – how fast the paper moves through the printer.

To compare speeds of a selection of printers I have devised a few simple benchtests. These programs produced the results shown in Table I. Rather than optimising the programs for a particular printer, all were run under the same conditions.

Program I is the most useful test. It gives the

```

   90 PRINT "Head speed=";(9
/11)/8;" inches per second"
```

Although not all printers had an NLQ feature, whenever possible Programs I and II were modified as appropriate and tested in this mode.

To use any of the the programs to test your own printer, type RUN, press Return and start timing simultaneously. Enter the time in seconds when prompted.

The results clearly show that you only get what you pay for. The fastest model proved to be the semi-professional Precision unit, which owes a lot to its four print heads.

Similarly Epson's EX-800 unit is fast, but very expensive although it does have a colour option. Of the cheaper units, the Panasonic provides excellent performance at a reasonable price.

Although none of the printers appear to have achieved their quoted speeds, it has to be remembered these figures are relative and not absolute.

For instance, the timings for CPS have not taken into account the extra time taken for line feeds. In spite of this, we feel these figures are the ones most likely to be duplicated in normal use.

● *In the next article we'll continue our investigation into the complexities of printers, examining graphics and bit image mode.*

*The Epson EX-800 colour printer*

## Buffers, queues and stacks

*The terms buffer, queue and stack are used very frequently in computing, but what do they actually mean?*

*Very often when computer devices talk to each other, one will send information faster than the other can process it. This is true for everything from the keyboard to the cassette interface.*

*A buffer is an area of memory controlled by the computer to act as a cushion. Characters wait in a buffer until they are required.*

*The argument for a buffer can be likened to a machine producing pies faster than the packer can remove them from the conveyor belt. Very soon, there'll be a disaster with all the pies ending up on the floor.*

*So the packer must have some way to stop this happening. He will tell the machine to stop making pies every time his hands are full. Similarly, a device can tell the computer when it's busy.*

*Since the packer can only hold one pie, the machine will spend a long time waiting for him to catch up.*

*Obviously this would not be very satisfactory, and one way to solve the problem would be to store the pies temporarily on a series of shelves – a buffer.*

*The machine could then make large batches of pies without having to wait. The larger the shelves – the bigger the buffer – the more pies can be made at a time.*

*Queues and stacks are two forms of buffer. The queue is a FIFO or first in, first out buffer. The example above is a queue. A stack, on the other hand is a LIFO or last in, first out buffer.*

*A dustbin is probably the simplest example of a stack buffer. As you throw your litter away it enters the bin and goes to the top of the pile.*

*The pile gets higher until the dustbin is full. When the bin is emptied, the last item to enter it is the first to be removed and vice versa.*

# NEW LOW PRICES!

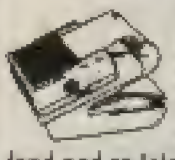
## Printer Stand



This new professional printer stand takes hardly more space than your printer. Due to the positioning of the paper feed and re-fold compartments i.e. one above the other, the desk space required for your printer functions is effectively halved. Additional facilities include; Easy access to paper from both sides, used with both top and bottom feed paper and with its dial controlled paper feed system with adjustable deflector plates it ensures smooth paper flow and automatic refolding.

80 Col ..... £29.95
132 Col ..... £34.95

## MONITORS FOR ELECTRON

**CM8852 – 14" RGB professional medium resolution colour monitor**

- Electron compatible
- Black matrix 0.39mm dotted picture tube.
- Resolution: horizontal 700 dots x 285 lines vertical

**£299.95**

Free cable and delivery

**CM8833 – 14" CVBS & RGB medium resolution colour monitor**

- Electron compatible
- Fastblanking to enable superimposing.
- Stereo audio
- Earphone socket
- Resolution: horizontal 600 dots x 285 lines vertical

**£269.95**

Free cable and delivery

**ALL MONITORS ARE DELIVERED FREE BY CARRIER**

# MICRO MESSAGES

## Preaching to the converted

*WHEN I first bought your magazine and read the Micro Messages section, I saw letter after letter starting with "I must congratulate you on having a fantastic magazine ...', and "What a brilliant magazine* Electron User *is ...".*

*At first I thought this was just a way of getting your letter printed, but after buying it for some months, I now realise that all the comments are true.*

*After typing in the Joystick Converter in the November 1987 issue, I found that it worked marvelously with Acornsoft's Magic Mushrooms and Meteors, Tynesoft's Phantom and Alligator's Blagger.*

*And there are probably many more games that can be introduced to the world of joystick control.*

*Finally, can you tell me how I can get the Electron's power socket fixed, as the computer keeps turning on and off while I am playing games?* – **Richard Smith, Chelmsford, Essex.**

● Letters are published because of their own merit and not because the flattery goes to the editor's head! The joystick converter proved very popular and we would like to hear from other readers who have found games which will work with it.

Fixing your power socket should be fairly simple. Check both wires for dry joints or fractured strands. Re-solder if necessary, but if the socket itself has worn out you can buy a replacement quite cheaply from most electrical spares shops.

## Santa's slip up

*CONCERNING the listing for Santa On The Tiles in the December 1987 issue of* Electron User, *I have double checked my programming, but still keep getting No such variable at line 810. If there is a mistake could you give me a correction?*

*Also, is there any significance in the fact that lines 1450 and 1460 are reversed, or is this a printing error?* – **Trevor R. Vaughan, Wood Green, London.**

● As we have said in the past, all listings published in *Electron User* are taken straight from working programs on disc and fed direct into the typesetting machine. Any errors likely to fall through the net are usually very obscure ones which even the author may not have come across after hours of play.

Please check the whole program as a typing error elsewhere might not be reported until line 810 is executed. No such variable means you've accidentally spelt something wrong somewhere.

However, you are quite right about lines 1450 and 1460. But even if entered in the order shown, they would still execute correctly as the function key would not be fetched from the buffer and executed until after the program ends at line 1460.

## Fun with codes

*I AM presently writing a spreadsheet program to suit my own requirements, but I don't know how to generate Ascii codes with Shift+Func and Shift+Control+Func, which can then be detected with GET or GET$.*

*The codes I require are from 150 upwards, and I have used *FX226, *FX227 and *FX228 which should change the base values for these function key combinations, but to no avail.* – **Andrew Wilson, Airth, Falkirk.**

● Unfortunately, the Electron's keyboard is completely different from the BBC Micro's, and the *FX calls you mention are implemented differently on the BBC's little cousin.

Instead of Shift+Function, use Func plus the keys A to P. For Control+Function use Func plus the keys Q to Z. There is no equivalent of Shift+Control+function.

These key combinations on the Electron are referred to as firm keys, and to set their bases to return the Ascii codes 150 upwards you should use *FX226 and *FX227 as on the BBC Micro, but note that *FX228

**Turn to Page 48 ▶**

## Starword or View – which is the best?

*I HAVE a couple of small problems which you may be able to solve. First, which is the better word processor – Slogger's Starword or View?*

*Second, when I stop work I often save my View file as DOC, and when I return I begin the next part and save it as DOC1. How can I load both DOC and DOC1 into the computer and save them as one file?* – **Andrew Wing, Hockley, Birmingham.**

● Answering your first question is rather difficult. Both word processors have their own merits, so it's up to you to decide which suits you best. Slogger's version is easier to get to grips with, while View tends to offer more advanced facilities, once you have spent time mastering it.

As to your second problem, we're not quite sure why you continue your work with a separate file. You could load in DOC, continue adding to it, and resave it as DOC again.

However, the solution to tacking two or more View files together is simple. Load in the first file – in your case DOC – and then type READ DOC1. View will then load DOC1 into memory at the end of the text already present.

This can be done for as many files as your computer has memory for.

◀ From Page 47

is not implemented. Type in the following:

```
10 *FX 226,150
20 G=GET:PRINT G
```

Now run it and press Func+A. You should have 150 stored in G and also printed on the screen.

**ALL programs printed in this issue are exact reproduction of listings taken from running programs which have been thoroughly tested.**

**However on the very rare occasions that mistakes may occur corrections will be published as a matter of urgency. Should you encounter error messages when you type in a program they will almost certainly be the result of your own typing mistakes.**

**Unfortunately we can no longer answer personal programming queries concerning these mistakes. Of course letters about suggested errors will be investigated without delay, but any replies found necessary will only appear in the mail pages.**

# Accuracy not lost

*AARRGH! Joe Pritchard does it again. I thought someone might have put him right after his Hardware Projects article in the May 1987 issue of* Electron User *where he states: "*FX 190,n allows us to speed up the conversion time from 10mS to around 5 to 6mS. We do, however, lose a little accuracy . . .".*

**FX 190,8 does not lose any accuracy – you cannot lose what isn't there. The Plus 1 contains an eight-bit A/D converter, a National Semiconductor ADC0844 to be precise, a fact which is clearly stated in the Plus 1 User Guide on pages 1, 6 and 8.*

*Another misconception is from Chris Nixon who says that his excellent BOS editor (*Electron User *October 1986) cannot reside in pages 9 and 10 on tape based machines since it would be corrupted by the next SAVE or LOAD.*

*Not so. This area is not used by SAVE and LOAD, but by *SPOOL and *EXEC, as well as any operations involving opening cassette files.*

*I am sorry to sound carping, but people do rely on* Electron User *for information, so I believe you should get it correct. Incidentally, Roland Waddilove's Mandelbrot program (May 1987) can be speeded up 10 per cent or more by adding the lines:*

```
625 SE%
1385 CL%
```

*which disable interrupts during the calculation. –* **Phillip A. Bender, Sunderland.**

● Thanks for pointing out both Joe's and Chris's misconceptions. However, Chris was working using the information contained in the Advanced User Guide, which is unclear.

As for Roland's Mandelbrot program, he was surprised that he forgot to disable interrupts – normally a hardened habit of his.

He adds that as the Mandelbrot set is symmetrical about the horizontal axis, plotting could be speeded up by 50 per cent by just calculating the top half and duplicating a mirror image for the bottom: This will cut the time taken from around two hours to one hour.

This was only realised after the program had been published and it was too late to modify it. Perhaps you would like to modify it yourself? It shouldn't be too difficult.

# Basic guide

*DURING the past month I have been trying very hard to get hold of the Advanced Basic Rom User Guide for the Electron and BBC Micro. I have tried my local computer store, bookshop, and Watford Electronics without success, and I don't know who the publisher is. Can you help?*

*I buy your magazine monthly, and I think it is good value for money. –* **C. Grant, Birmingham.**

● If you mean the Basic Rom User Guide by Mark Plumley and published by Adder, Watford Electronics most certainly does stock it. There is also another Basic Rom User Guide by Colin Pharo, published by The Cambridge Microcomputer Center, 153-154 East Road, Cambridge.

# Electron users only

*IN the December 1987 issue of* Electron User, *you included a routine to speed up the cassette filing system, by shortening the gaps between data blocks.*

*As a BBC Micro user, I took the magazine home and typed it in. Apart from the warning "Electron OS 1.00 only", the utility seemed to work until I tried saving a program and received the message Data? 00 and so on.*

*This utility seems such a useful one to me, and I would really find it helpful if you could publish a conversion for the BBC Micro. –* **Jon Breen, Taunton, Somerset.**

● The warning message is there for a very good reason.

Although the Electron and BBC Micro are very similar, you just can't expect a complex routine like this one to run on what is esssentially different hardware.

The Turbo Loader is a very accurately timed piece of code, and as such would need a complete rewrite for the BBC Micro.

Although many *Electron User* games and utilities run on the BBC Micro, this is one of the rare ones that doesn't.

# Get rich quick!

*I WOULD be grateful for information concerning payment for programs accepted by* Electron User, *and for hints on the required format of submitted listings and articles. –* **Haydn Griffiths, Gt. Yarmouth, Norfolk.**

● We generally pay by the word. The actual amount can vary according to both the article and program quality, and the amount of editing needed to get the program and text up to scratch.

Programs would have to

# Free software galore!

*IN answer to Lee Harland's letter in the November 1987 issue: Yes, there is a free software library which is advertised in* Electron User *each month. It is the online database called MicroLink.*

*Connecting to this service has the added advantage of not having to laboriously type in the program listings each month.*

*But how do you connect to MicroLink? In fact, how do you attach a modem and communication package to the Electron? –* **Andrew Pickles, Brentwood, Essex.**

● Pace Miracle Technology offers a modem, RS423 interface and Commstar – everything you need to log on to MicroLink. You'll need a Plus 1 if you haven't already got one, and the price is £148.58. Contact Pace at: Pace Miracle Technology, Juniper View, Allerton Road, Bradford BD15 7AG, or telephone 0274 488211.

Alternatively, Slogger offers an RS423 and Commstar software. You'll need to add a modem to this.

be very good indeed to justify the top rate, so the average payment would be slightly less than this.

Send your articles in on disc if possible, otherwise tape will do.

And use a word processor such as Mini Office, View or Starword. However, if you can't, don't worry – send it on paper.

It is the programs themselves that must be supplied on tape or disc, with the format clearly marked on the cassette or disc itself. We can't type in listings.

Always mark all parts of a submission clearly with your name, address and telephone number if possible.

We can then get in touch to either return the work with suggested improvements, or post the payment.

Payment is always upon publication.

# The hare and the tortoise

*THE BBC Micro and Acorn Electron computers both use the same 6502A microprocessor, but for some reason the BBC Micro is twice as fast as the Electron. Why is this?* – **Andrew Bury, Kingswinford, West Midlands.**

● There are several reasons why the Electron is slower than its BBC Micro cousin. The first and most important, is that the BBC Micro uses many dedicated chips, like the 6845 CRTC video chip to refresh its screen ram. The Electron, on the other hand, leaves this work to the overburdened 6502 and ULA.

This means that in the higher screen memory modes – especially 0-2 – more processing time is wasted on this task, which can drop the overall processing speed by nearly 25 per cent.

To make matters worse, the 6502 can only access ram four bits at a time. This effectively slows all ram access from 2mHz to 1mHz – a drop of 50 per cent – leaving the Electron chugging away at roughly one third the speed of the BBC Micro in modes 0-2.

However, there are several ways around this problem. The easiest is to buy the superb Turbo board from Slogger, which jacks the Electron up to within a few per cent of the BBC Micro's speed.

Software techniques can help a great deal as well, for instance disabling interrupts from machine code when keyboard access is not required (see Philip Bender's letter opposite).

## Locked out

*I HAVE been reading your excellent magazine for some time now, and I wonder if you could help me with some problems I am having with my Electron?*

*How do you lock files? I have a short program to load in locked files, but am having trouble saving my own.*

```
  10 MODE 1:FOR N=0 TO 50
  20 DRAW RND(1200),RND(102
4):NEXT
  30 y=80:x=0:z=1
  40 PROCa(x,y):REPEAT
  50 UNTIL GET:GOTO 30
  60 DEFPROCa(x,y):FOR X=x
TO y STEP z:R1=80-X:R2=98-((
X/80)*49)+6:R3=32-((X/80)*32
):R4=54-((X/80)*17)
  70 VDU23;1,R1;0;0;0,23;2,
R2;0;0;0,23;6,R3;0;0;0,23;7,
R4;0;0;0
  80 NEXT:ENDPROC
```

*And can you explain why this Mode 1 screen shrinking program works perfectly well on the BBC Micro, yet does nothing what so ever on the Electron. Why is this?* – **Richard Moore, Blyth, Northumberland.**

● You just can't lock cassette files that easily. To explain here how to do it would enable a lot more people to write their own versions of your dubious file unlocker. Basically, just reverse the operation of your unlocker.

Your screen-squashing program relies on the presence of the BBC Micro's 6845 CRTC video chip. This is not present on the Electron, as the screen is driven by one Acorn custom ULA chip so the program won't work.

## DFS exposed

*I WISH to inquire if Mark Smiddy's very useful ADFS Exposed program in the November 1987 issue of* Electron User *could be adapted for use with ACP's E00 1770 DFS.*

*I have a number of discs now with all sorts of games and utilities requiring PAGE at &E00, and it would be very useful if I could check the disc status on those as well as my ADFS discs.*

*My configuration is an Electron and Slogger 64k/ Turbo board, Plus 1 with ACP ASR (in which the E00 DFS is fitted), Plus 3, and PMS second processor.* – **John D. Mosby, Glenfield, Leicester.**

● It is not possible to adapt the program easily as the DFS works in a completely different way to the ADFS.

However, *FREE will tell you the total free space in figures, and if you need to see where the spaces lie then *INFO *.* will help you.

As a DFS disc holds less information than an ADFS disc, and its layout is generally more comprehensible to the prying eye, a utility such as Mark's could be a slight case of overkill.

## Garbled graphics

*I RECENTLY bought an Epson P-40 printer and a First Byte printer interface. However, I don't seem able to understand how to get the printer to output in bit image mode.*

*I have experimented using VDU 1,27,75 which is ESC "K", but it seems to wait until the printer buffer is full before doing anything, and then it is printed all jumbled up.*

*Also, I have your Mini Office tape which I bought from your magazine and would like to say what a brilliant package it is.*

*Thanks are also due to Slogger, whose advice enabled me to get my P-40 – which has no printer buffer – to work with the Plus 1.* – **Brian Westgate, Barnhill, Dundee.**

● You are quite correct in choosing ESC "K", but you must give two parameters saying how much bit image data is being sent, low byte followed by high byte, followed by the data itself.

Furthermore, each byte in a VDU string must be preceeded by a one, which means send the next VDU code only to the printer. Try the following example, which should print 30 space invaders on your P-40:

```
10 MODE6:VDU2
20 FOR S%=1 TO 30
30 VDU1,27,1,75,1,8,1,0
40 RESTORE:FOR L%=0 TO 7
50 READ B%:VDU1,B%
60 NEXT:VDU1,32
70 NEXT:VDU1,13,3:END
80 DATA 49,122,220,244,244,2
28,122,49
```

## Snapshot taped

*I AM having some problems trying to use the Snapshot utility in the September 1987 issue of* Electron User. *It works fine with View, but when I try to use it with games loaded via Slogger's T2P4 rom, the system switches over to tape and saves the screens to tape.*

*Can you tell me how to get it to work as it should? There are no typing errors in the program, as I am using the listing from the October tape.* – **James Hymes, Millwall, London.**

● The T2P4 rom is designed to copy software from tape to disc. However, the cassette filing system will always be switched in while T2P4 is active. In addition to this, Snapshot is unlikely to work with commercial software: it will, however, work with your own and magazine listings.

# Learning CAN be fun

- Use your Electron to teach and amuse your children at the same time.
- Three packages crammed full of educational programs – and so easy to use!
- Each program has been educationally approved after extensive testing in the classroom.

**ONLY**
**£4.95 tape**
**£5.95**
**3½" disc**

## Ages 2-5

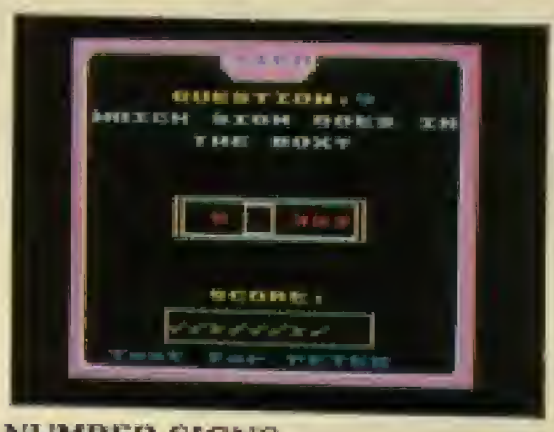
Alphabet
Colours
Counting
House
Magic Garden
Matchmaker
Numbers
Pelican
Seaside
Snap

PELICAN
*Teach your children to cross the road safely at a Pelican crossing*

HOUSE
*Select the colours to draw a house – hours of creative entertainment*

## Ages 5-8

Balance
Castle
Derrick
Fred's Words
Hilo
Maths Test
Mouser
Number Signs
Seawall
Super Spell



NUMBER SIGNS
*Provide the correct arithmetic sign and aim to score ten out of ten*

BALANCE
*Learn maths the fun way. Type in the answer to balance the scales*

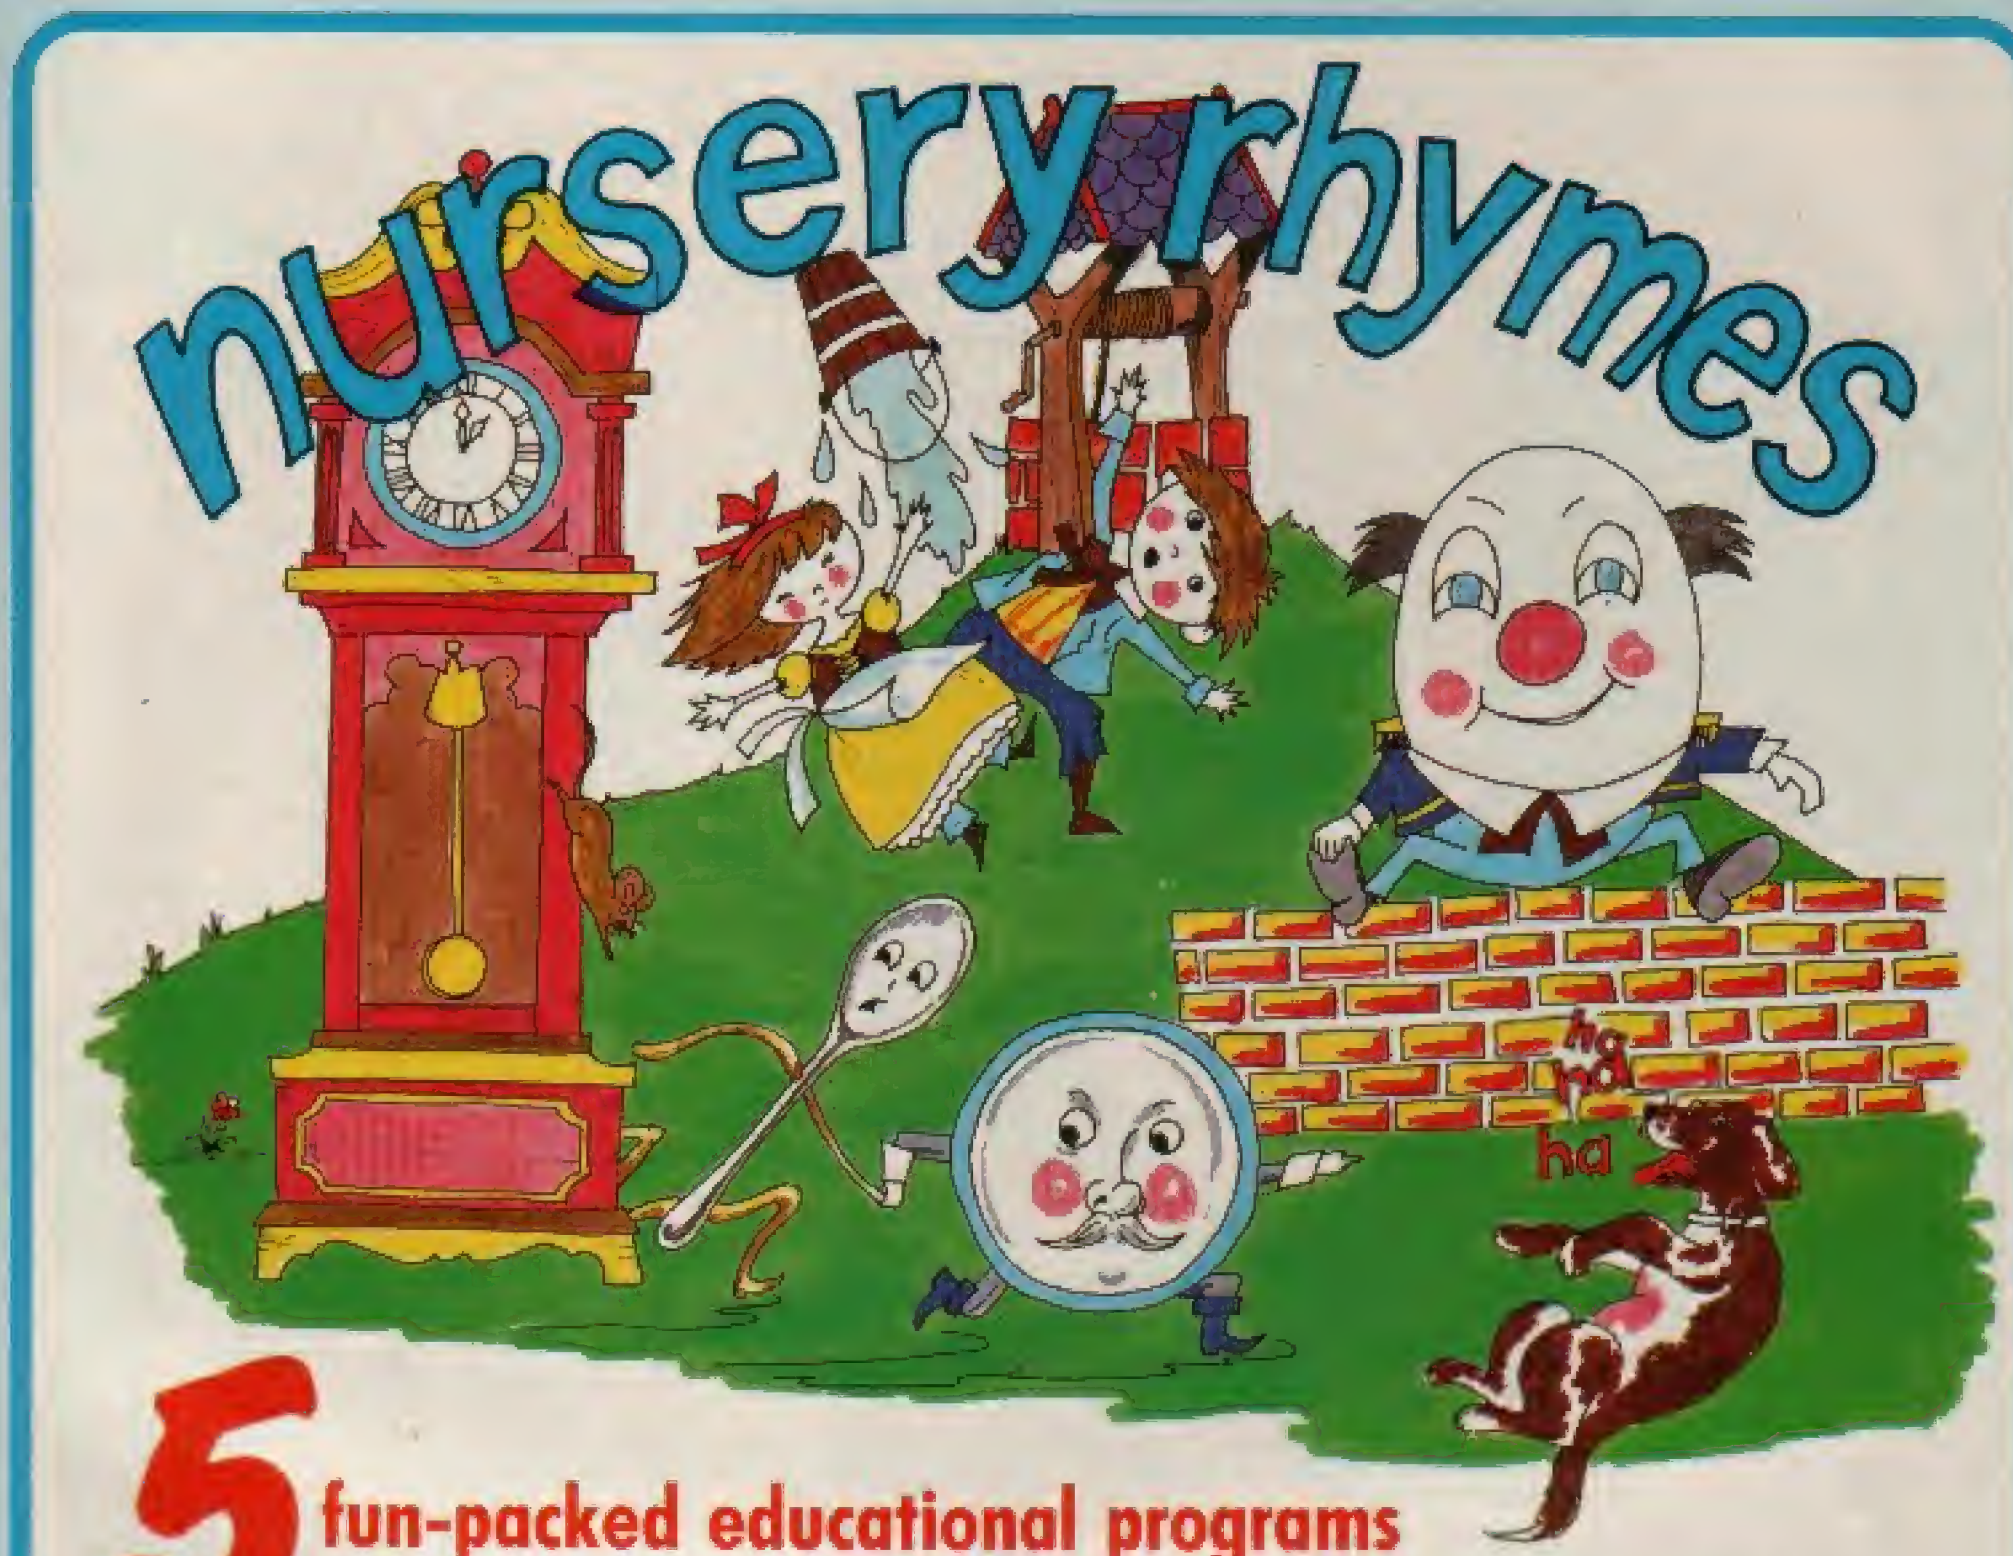
## Ages 8-12

Anagram
Codebreaker
Dog Duck Corn
Guessing
Hangman
Maths Hike
Nim
Odd Man Out
Pelmanism
Towers of Hanoi

HANGMAN
*Improve your child's spelling with this fun version of the popular game*

ODD MAN OUT
*Find the word that does not fit – before your time runs out*

**TO ORDER PLEASE USE THE FORM ON PAGE 53**



# 5 fun-packed educational programs . . . for young children everywhere

This delightful collection of programs is based around children's favourite Nursery Rhymes. There's plenty of sparkling colour, sound and captivating animation to keep them riveted – and as they play they'll be learning all the way.

- ★ Tell the time with Hickory Dickory Dock.
- ★ Assemble the jigsaw in Humpty Dumpty.
- ★ Learn to spell with Jack and Jill.
- ★ Match the animals in See Saw Marjory Daw.
- ★ Play an exciting game in Hey Diddle Diddle.

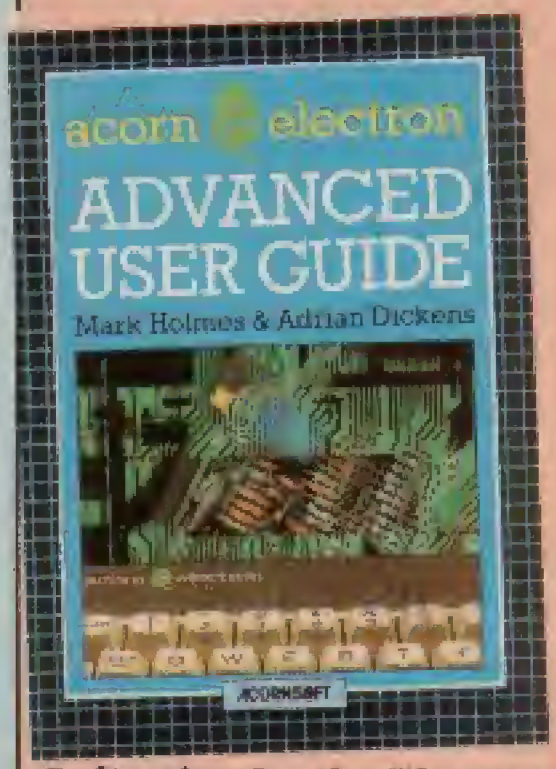
Children from two to nine will be entertained for hours with these interactive programs. Don't miss out on this beautiful gift for your family – and at a very special price.

**ONLY £5.95 (cassette)**
**£6.95 (3½" disc)**

**Suitable for any Acorn Electron**

**TO ORDER PLEASE USE THE FORM ON PAGE 53**

# This is THE ultimate guide to the Electron!



**This detailed guide to the Electron's operating system is a must for every serious Electron user. In its information packed pages you'll find:**

- ★ Full details of how to implement the powerful *FX/OSBYTE calls.
- ★ Page ROMs revealed: The way they work and how to write your own.
- ★ Programming the ULA – all you need to know.
- ★ Full coverage of memory allocation and usage – make every byte count.
- ★ Complete circuit diagram: How to use the expansion capabilities Electron's exciting to the full.

***and much, much more . . .***

***Quite simply, the Electron Advanced User Guide is THE essential handbook that will allow you to exploit the full potential of the Electron.***

**Don't miss this money-saving offer!**

***Only £3.45*** *(inc. P&P)*

***SAVE a massive £6!***

(Normal price £9.45)

**Exclusive offers ONLY for readers of Electron User**

**Save £3 on this classic book!**

This best-selling book takes the reader through the fundamentals of writing programs. Its hands-on approach has been specifically designed to teach the absolute novice not only the formal rules of Basic but also that elusive quality – good programming style. By working through its many examples, the reader will gain a clear insight into structured programming and will quickly acquire the ability to use structured techniques in creating his own programs.

**Was £5.95 NOW £2.95**

## *Your Electron needs protecting!*

Protect your Electron with our luxury dust cover made of soft pliable water-resistant vinyl, bound with strong cotton and decorated with the *Electron User* logo.

## *Keep your copies neat and clean!*

This handsome binder is bound in attractive red pvc with the *Electron User* logo in gold blocking on the spine. It will hold 12 magazines firmly secured in place by metal rods.

# Measuring up

## BARRY WOOD shows how to get converted

**CONVERTING from one form of measurement to another is awkward when you can't remember the conversion factor and can't find it.**

This short utility provides you with a high-powered conversion program at your fingertips. It is easy to use and accurate. Type it in and save it, then run it – you should get a display like the one shown here.

When you run it you are presented with the different conversion units, metric on the left, imperial on the right. Arrows indicate the current selection, and at the bottom is the current conversion factor. At the top of each column block is a window – these are the data input and output areas.

The spacebar alters the unit selection, the S key swaps columns and the < and > keys specify the direction of conversion.

For instance, to convert from grams to pounds first select the right-hand units with S and press the spacebar to move the pointer to pounds.

Press S to select the left-hand column and spacebar again to point to grams. Type in a number and press Return.

Now press > to indicate the direction of conversion and then the Copy key to find out the result. The value in pounds will be printed in the top window.

Note that some conversions are impossible – like litres to inches. These are indicated by an error message in the conversion factor box at the bottom of the screen.

# Feeling one degree under?

## ROLAND WADDILOVE presents a conversion routine in Part 2 of this series on Pascal programming

**IN this short series of articles we are examining the popular programming language Pascal, invented around 1970 by Niklaus Wirth.**

There are two different packages available on the Electron – ISO-Pascal, a rom-based version supplied on a cartridge ready to be plugged into a Plus 1 or Rombox, and S-Pascal, a cassette-based version.

The rom cartridge is the full implementation of the language (to the ISO standard), while S-Pascal is a much simpler, cut down (and cut-price) version. All the programs this month were written using S-Pascal, but they will also run under ISO-Pascal.

Last month Mike Plummer introduced the language, revealing a little of its history and basic structure. Essentially it was designed to teach good programming practice to students studying computer science and it is a highly structured language as we'll see.

It is a popular language, and although rarely seen on home micros, is in widespread use by professional programmers on much larger and powerful computers than our Electron.

This article is devoted to just one program – a short routine that will convert a temperature in degrees Fahrenheit to one in degrees Celsius. This shows quite clearly the beautifull structure of Pascal programs.

We'll write it in several different ways to show the wide range of commands available and their syntax. Program I shows it in its simplest form.

Notice that it starts with:

```
program temp(input,output);
```

This is the hallmark of all Pascal programs. It contains the program name, *temp*, and tells Pascal that information will be input and output – we are going to type a temperature in, convert it and print out the result. Most Pascal programs input and output information – if they sat there doing nothing they would be very dull indeed!

The next line is a list of the variables used in the program and their type. We are going to use *f* to hold the Fahrenheit temperature and *c* to store the Celsius temperature. They are both integers.

```
program temp(input,output);

var f, c : integer;

begin
 write('Enter temp:');
 readln(f);
 c:=5*(f-32) div 9;
 writeln('Celsius=',c)
end.
```

*Program I*

Logically, the labels *begin* and *end.* mark where the program begins and ends. The first thing it does is write "Enter temp:" on the screen. It then reads a number from the keyboard into the variable *f* using *readln(f)*. We could have used *read(f)* here, but *readln(f)* is better as it moves to a new line after the input.

The conversion from Fahrenheit to Celsius is carried out by:

```
c:=5*(f-32) div 9;
```

Notice that we use := to set a variable equal to a value, whereas in Basic we would use just an equals sign on its own. Also note that all statements except the last end with a semicolon. This is the statement separator and acts rather like Basic's colon.

Finally the new temperature is written to the screen and the program stops when it hits the *end.* on the last line.

> ' ... Pascal is in widespread use by professionals on much larger computers than our Electron '

Now we'll alter the program slightly, taking out the calculation from the main loop and placing it in a procedure called *ftoc*. This is called from within the main *begin – end.* structure:

```
program temp(input,output);

var f, c : integer;

procedure ftoc;
begin
 c:=5*(f-32) div 9
end;

begin
 write('Enter temp:');
 readln(f);
 ftoc;
 writeln('Celsius=',c)
end.
```

*Program II*

As you can see the procedure has been placed after the variables, but before the main *begin – end.* program loop. Procedures always come before the start of the program, unlike Basic which insists on them being placed at the end.

Pascal will skip all procedure definitions at the beginning of a program and will always start execution at the main *begin*.

Notice that the procedure

**Turn to Page 56 ►**

# Programming

◀ *From Page 55*

has its own *begin – end;* loop indicating where it starts and ends. It could also have its own variable list as well. It is called quite simply from the main loop by entering its name – *ftoc*.

Like Basic, we can pass parameters into procedures. Program II can be modified to produce Program III.

```
program temp(input,output);

var f, c : integer;

procedure ftoc(d:integer);
begin
 c:=5*(d-32) div 9
end;

begin
 write('Enter temp:');
 readln(f);
 ftoc(f);
 writeln('Celsius=',c)
end.
```

*Program III*

Here we are passing the Fahrenheit temperature in *f* to the procedure *ftoc*. Inside the procedure the local variable *d* is used.

Notice that in the procedure definition we must specify the type of the parameter passed. Pascal is very strict about variable types and ranges.

We have been using our procedure *ftoc* to calculate and return a single value, so why not use a function instead? Program IV shows how this may be done.

As a function returns a value, Pascal insists that we specify its type in the definition. In this case it is an integer. The value is returned by equating its name to the result of the calculation in the main body of the definition.

Apart from these two points, the program is no different from the last one.

```
program temp(input,output);

var f, c : integer;

function ftoc(d:integer):in-
teger;
begin
 ftoc:=5*(d-32) div 9
end;

begin
 write('Enter temp:');
 readln(f);
 c:=ftoc(f);
 writeln('Celsius=',c)
end.
```

*Program IV*

```
program temp(input,output);

var f : integer;

function ftoc(d:integer):in-
teger;
begin
 ftoc:=5*(d-32) div 9
end;

begin
 write('Enter temp:');
 readln(f);
 writeln('Celsius=',ftoc(f))
end.
```

*Program V*

However, it allows us to use the function call wherever we could use a number or variable. This enables us to shorten the last program.

The variable *c* in the last *writeln* has been replaced by the function call *ftoc*.

As these short programs show, Pascal is a highly structured programming language, forcing you to lay out your listings in a clear and easy-to-read manner. It encourages good programming practices.

● *We'll continue to look at this fascinating language next month when Mike Plummer will be back with some more complex examples.*

# VIEWING YOUR BASIC LISTINGS

## ROLAND WADDILOVE shows disc drive owners how to edit programs using View

**MOST people tend to regard a word processor like Acornsoft's View as simply a tool for writing letters, documents and reports. While this is true, it is far more flexible than many people think, and there are a lot of other uses.**

In this article we'll look at how programmers can use View to create and edit Basic and assembly language programs – probably something they may not have thought possible.

In fact, using View in prefence to Basic's built-in editor has many advantages, as we will see.

To show how flexible View is let's start by entering a short program just as we would a letter or document.

First enter View either by pressing Control+Break or typing *WORD. We must tell View not to try to format or justify the program we are about to write, so enter:

```
SETUP I
```

to set just insert mode. Now press Escape to enter edit mode and type in the following short listing:

```
*BASIC
AUTO
REM Strip
MODE 6
PRINT
INPUT "Filename";a$
A%=OPENIN a$
B%=OPENOUT "Listing"
REPEAT
C%=BGET#A%
BPUT#B%,C%
IF C%=13 IF NOT EOF#A% FOR
I%=1 TO 5:C%=BGET#A%:NEXT
UNTILEOF#A%
CLOSE#0
PRINT "Finished"
```

Notice that I haven't used any line numbers – they aren't needed. This is where structured programmers have a big advantage over spaghetti programmers using lots of GOTOs.

Using View to write programs isn't really advisable if you use GOTOs to jump here, there and everywhere. And GOSUBs should be avoided if at all possible – they are just as awkward to cope with. Also notice that in this listing the first line is *BASIC and the second is AUTO.

What we're going to do is save the file to disc then *EXEC it back – while we're still within View.

The *BASIC command selects Basic and the AUTO generates the line numbers. To see this in action, enter command mode and type:

```
SAVE TEST
*EXEC TEST
```

and you'll see the program load and the line numbers automatically added. Press Escape when it has finished loading. You've now got the listing into Basic.

This is now a normal Basic program and you can edit it, run it, save it and so on, just as with any other Basic program.

If you need to make further changes you can either make them from Basic using the program in memory, or edit the file on disc using View. The advantage of having a View file is that you can easily modify it in ways not possible in Basic.

For instance, you can use View's search and replace functions to change variable names, block move whole sections of Basic programs, and so on.

Go back into View and re-load the program with:

```
*WORD
SETUP I
LOAD TEST
```

Now change the variable *A%* to *infile%* throughout the program with:

```
FOLD OFF
CHANGE A% infile%
```

The FOLD OFF command tells View not to match the case of the first item – *A%*. If you try this with FOLD ON, *infile%* will become *Infile%* as View changes the case of the i to I to match A.

You can save this modified program and *EXEC it back in as before. As you can imagine, changing the name of a variable throughout a long program could literally take hours in Basic, but in View it is a matter of seconds – an enormous saving in time and effort.

Why would you want to change the name of a variable? Well, it often helps to use long descriptive variable names when developing a complex program – they aid readability and help with debugging. These however, slow down program execution and greatly add to the length of the listing causing problems.

By writing the program in View you gain the advantage of long variable names, but can shorten them all with a handful of CHANGE commands before *EXECing it into Basic and running it. So you gain the best of both worlds – readable listings, but fast compact programs.

Converting a View file into Basic is easy, as we have seen. The reverse process of converting a Basic listing into a View file isn't quite so simple.

We need a Basic program in memory so *EXEC TEST into Basic, pressing Escape when it has finished loading. Now we'll try to convert it back to View – enter:

```
*SPOOL STRIP
LIST
*SPOOL
```

Now go into View, and load

**Turn to Page 58 ►**

```
FJ .....*.....*.....*.....*.....*.<
    *BASIC
    AUTO
    REM Simple machine code program
    DIM code% 100

    ]
    NEXT
    CALL code%
    END

*****************************************
```

*Editing an assembler program using View*

# Feature

◀ *From Page 57*

the *SPOOLed file with:

```
*WORD
SETUP E
READ STRIP
```

This is how the program will look in edit mode:

```
>LIST
   10REM Strip
   20MODE 6
   30PRINT
   40INPUT "Filename:"a$
   50A%=OPENIN a$
   60B%=OPENOUT "Listing"
   70REPEAT
   80C%=BGET#A%
   90BPUT#B%,C%
  100IF C%=13 IF NOT EOF#A%
FOR I%=1 TO 5:C%=BGET#A%:NEXT
  110UNTIL EOF#A%
  120CLOSE#0
  130PRINT "Finished"
>*SPOOL
```

You'll see it starts with the prompt > then LIST, and is followed by the program, complete with line numbers. Finally, >*SPOOL follows at the end. To get back to the original listing in View we need to tidy this listing up a little.

The >LIST and >*SPOOL are easily deleted with Func+8 (delete line), but the line numbers are impossible to remove. You can't search for and replace them.

This is where the program Strip we have been experimenting with comes in. It's job is to strip the line numbers from a SPOOLed Basic program.

You've got it on disc, so *EXEC TEST to load it into Basic. Now run it.

You'll first be prompted for a filename, so enter STRIP the file you just spooled. The disc drive will start up and after a short while the message "Finished" will be printed on the screen.

Strip will still be there on the disc, but in addition there will also be a file called Listing – this is Strip with the line numbers removed.

```
*BASIC
AUTO
REM Machine Code
oswrch=&FFEE
FOR pass=0 TO 2 STEP 2
P%=&C00
[ OPT pass
  LDX #32     \ASCII " "
.loop
  TXA
  JSR oswrch  \print char
  INX         \next one
  CPX #127    \done all?
  BNE loop
  RTS
]
NEXT
```

Go into View as before and read it in. Chop off the >LIST and OL at the start and finish and you are left with your original program in View.

So far we've seen how to write Basic programs in View. Well, it is just as easy to write machine code files as well. Enter the following short assembly language listing above into View:

Save it with the name MCODE then *EXEC it into Basic. Press Escape when it has finished loading and run it. Now execute the machine code with CALL &C00 and you should hear a beep if all is well.

Although I have only discussed Basic and assembly language here, the technique applies equally well to other languages – particularly to Lisp which hasn't got any form of editor. It is far easier to write in View and *EXEC the file into Lisp.

As we've seen, View is more than just a simple word processor – it is a powerful program editor and development tool as well.

Try it, and you'll never go back to Basic's editor.

**PMS MULTI-FONT NTQ**

Near Text Quality Typesetting Software

NEW ELECTRON VERSION

**"Quite simply the best font software available for the BBC" – NTQ users say it – the reviewers agree –**

If you want to produce quality worksheets, newsletters, OHP slides, menus, leaflets, concert programmes and tickets, exam papers, reports, invoices or just add style to your personal letters – NTQ's for you.

Use NTQ with VIEW, WORDWISE, WORDPOWER or BASIC with ANY EPSON compatible printer (MX and FX).

FONT LIBRARY CONTAINS OVER 50 HIGH QUALITY FONTS – standard typefaces + foreign languages + maths/science symbols + fancy styles.

Write or phone for leaflet, full list of fonts and sample printout.

MIX FONTS, HEIGHTS WIDTHS AND PITCHES IN ONE LINE OF TEXT - just like this:

# ODD ONE OUT

## Improve your child's perception with CHRIS NIXON's educational game

**ODD One Out is a game which can help children learn to group similar objects together, and reject any which don't match the group in a specific way.**

Teaching your children to group together objects that have something in common is a slow task, and is often aided by the use of games, puzzles and other easily followed teaching tools. But in order to avoid loss of interest, all such devices must have the added attraction of being fun.

The use of computers in homes and primary schools is enabling some of these educational tools to be converted into colourful, interesting programs which can be used in the home or classroom unsupervised – to an extent – by the parent or teacher.

The Electron has long been established in primary schools throughout the country, and was therefore an ideal vehicle for Odd One Out. Two players are required for this game; which will help stimulate discussion over the questions posed. There are only 30 questions, but the program only just squeezes into the Electron's memory as it is, and the use of colour – which helps to retain interest – and 40 column text would be lost if a higher-memory mode had been chosen at the outset.

Each player is first asked for their name – always important in childrens' games. Large letters are used here, and extensively throughout the game to aid with reading the messages.

The players can then sit back and wait while the playing board is drawn on the screen. This consists of two winnometers, which are wide horizontal bars, one above the other.

These gradually fill with yellow each time a player's question is answered correctly, and the player who reaches his win marker first is awarded one point, and both winnometers are then reset for the start of the next game.

Each question takes the form "Freddy, which is the odd one out?" followed by a list of five objects. A pointer slowly moves down the list, and selection is made by pressing the spacebar while the pointer is over one of the choices. This is so children with limited coordination can participate in the game.

The 30 questions are held in data statements at the end of the program, and if you want to change them, the format is straightforward.

Four words or phrases which have something in common are seperated by commas, with a fifth word or phrase which is the odd one out inserted anywhere among them.

Then another comma and a sentence explaining what the other four have in common, and finally another comma and a number between 0 and 4 identifying which of the five items is the correct choice.

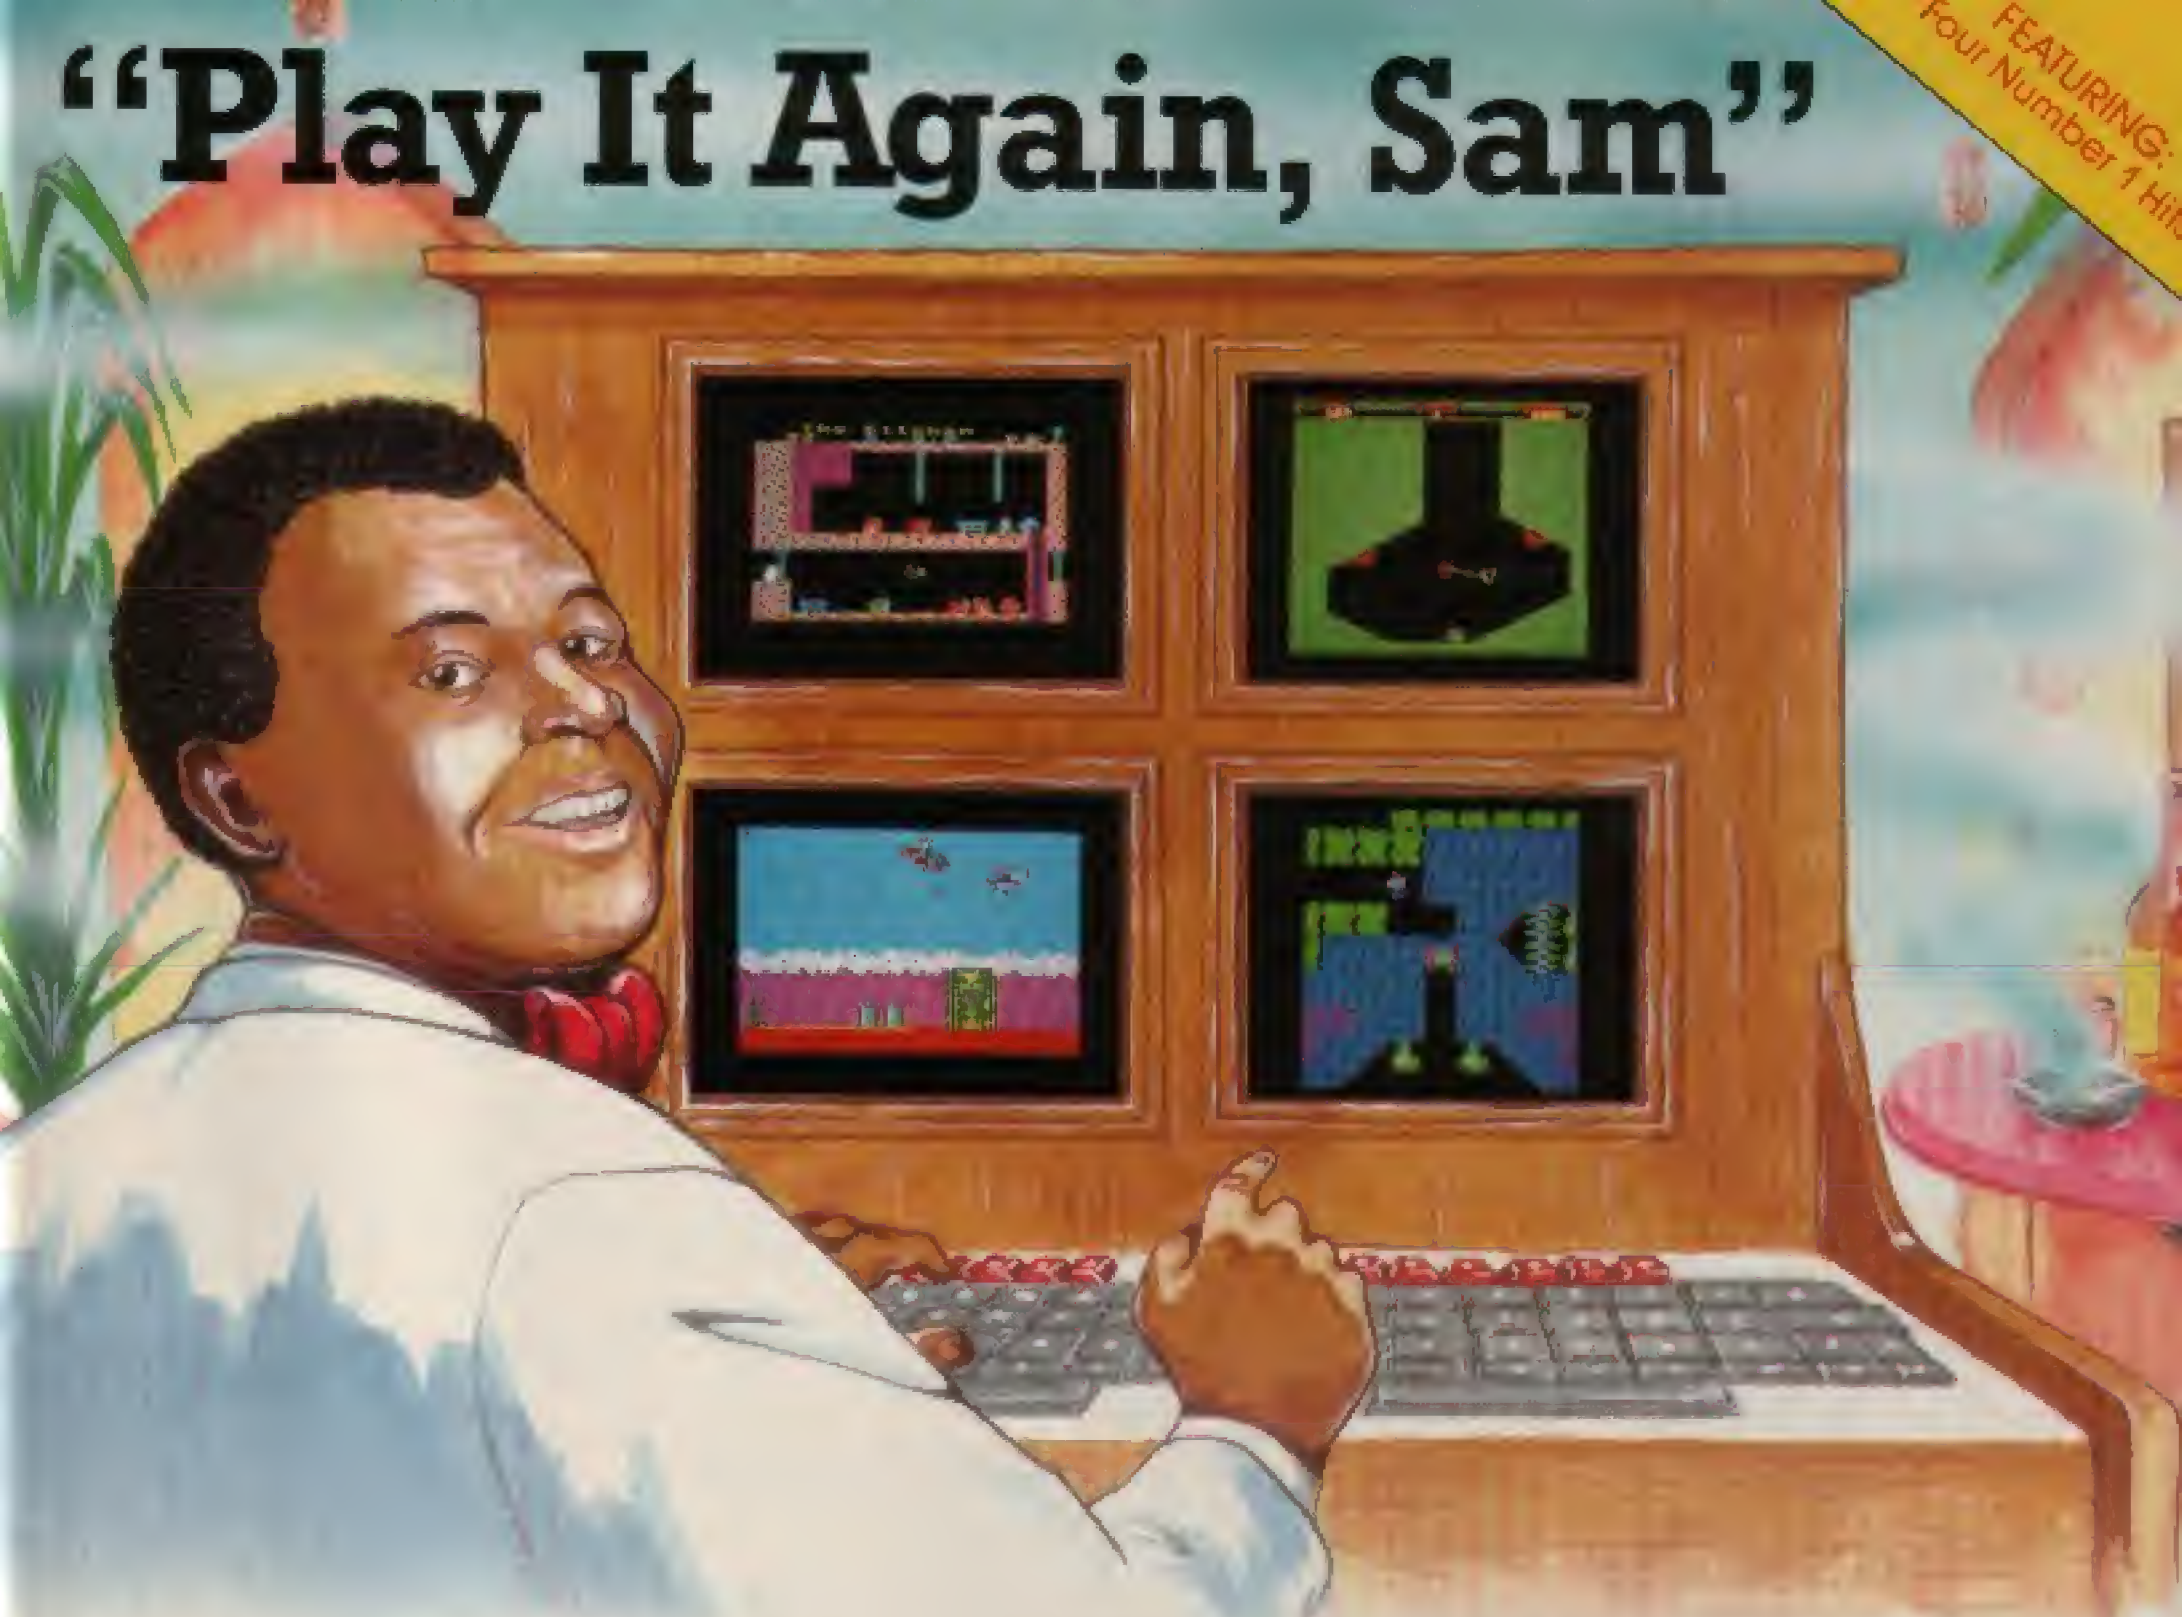
# "Play It Again, Sam"

FEATURING: Four Number 1 Hits



## THE BEST COMPILATION EVER
### for the BBC Micro and Acorn Electron

Sam, an ardent fan of Superior Software's games, is always ready for a challenge... and the tougher the better! Here's four games that, as time goes by, he returns to again and again.

Citadel, a fascinating arcade-adventure, features over 100 beautifully detailed screens of action. Computer Gamer reported: "The game is extremely good. Well worth the cash."

Thrust is simple and fun-to-play, yet incredibly realistic and highly addictive.
"This game has class...try it!" urged Computer & Video Games.

Stryker's Run is a challenging action-packed combat game.
"This game will impress you...the graphics are stunning...this should be in every collection," A & B Computing remarked.

Ravenskull is a massive arcade-adventure game, full of puzzles and problems to be solved.
Acorn User commented: "Ravenskull is a very good game and is destined to become another Superior classic."

ACORNSOFT

Dept. PS2, Regent House, Skinner Lane, Leeds LS7 1AX. Telephone: 0532 459453

Please make all cheques payable to "Superior Software Ltd".

24 HOUR TELEPHONE ANSWERING SERVICE FOR ORDERS

**OUR GUARANTEE**

- All mail orders are despatched within 24 hours by first-class post.
- Postage and packing is free.
- Faulty cassettes and discs will be replaced immediately. (This does not affect your statutory rights)

# BBC/ELECTRON 'IMAGE' V.2

**'IMAGE' was the ultimate tape back up system, now, it's even better**

You can be completely assured that this is the best and most able program of its type available. It can deal with:

- Locked programs
- Programs of any length
- 300† and 1200 BAUD
- Files
- ?'s (Ctrl codes) in Filename
- Multiple back ups
- False or trick block info
- Changing Filenamet
- Continous data streamt
- Locking and unlocking programs

It is VERY IMPORTANT INDEED purchasers take note that 'IMAGE' is for sale strictly for making BACK-UPS of your own software for your own use, for protecting your own programs, or as an aid to putting software on disk (by removing locks from tape software). Any person found using the program for illegal purposes runs the risk of being prosecuted.

To receive your copy of 'Image' send a cheque or P.O. for the sum of

**An Astounding £5.60 to:**

**Peter Donn, Dept. EU, 18 Tyrone Road,**

**Thorpe Bay, Essex SS1 3HF**

Please state BBC or Electron version. V1 owners can obtain V2 by sending £1.50 + V1 without case

AA269

† BBC version only

# Spellbinder

SEARCHING A ROOM

A DEATHMONK APPROACHES

ANOTHER NASTY CONFRONTATION

WANDERING THROUGH WOODLAND

## Leg of Toad, and Golden Fruit, Mix with Ashes and Nightshade Root.

At the end of the thirteenth century, there lived in the land of Lorraine ten wise and powerful Magelords. Each of them had studied sorcery and enchantment from childhood days, and each knew how to evoke potent spells capable of causing metamorphosis and devastation.

You play the role of one such Magelord named Eldon The Spellbinder. Your task is to find the evil Zorn, who has deserted the Magelord brotherhood and fled to the Castle of Lorraine.

Then, by collecting the correct ingredients, you must mix the Ultimate Spell, cast it at Zorn and banish him for good.

A captivating 3D arcade-adventure full of problems to be solved by magical means. Only the appropriate ingredients mixed in the correct order will produce all the powerful spells which you need to complete your mission of destiny.

| | | | |
|---|---|---|---|
| BBC Micro Cassette | £9.95 | Acorn Electron Cassette | £9.95 |
| BBC Micro 5¼" Disc | £11.95 | Acorn Electron 5¼" Disc | £11.95 |
| BBC Master Compact 3½" Disc | £14.95 | Acorn Electron 3½" Disc | £14.95 |

**(Compatible with the BBC B, B+ and Master Series computers).**

The screen pictures show the BBC Micro version of the game.
The graphics of other versions may vary.

### PRIZE COMPETITION

If you complete the Spellbinder mission (by killing the evil Zorn), you can enter our competition. Prizes include a superb engraved trophy, with Spellbinder T-shirts and signed certificates for runners-up.

Closing Date: 30th June, 1988.

SUPERIOR SOFTWARE Limited

ACORNSOFT

Dept. SPR3, Regent House, Skinner Lane, Leeds LS7 1AX. Telephone: 0532 459453

Please make all cheques payable to "Superior Software Ltd".

# BONE CRUNCHER

Bono takes the skeletons to a cauldron

Bono's partner Fozzy restrains a monster

**A PRIZE FOR EVERYONE WHO COMPLETES THE GAME**

Buy Bonecruncher and see if you can complete all the game screens!

All successful players will receive a superb portable radio with headphones (illustrated on the right), a colourful Bono's Bathing Co. badge, and a signed certificate.

Closing Date: 30th April, 1988

- Full of Strategic Puzzles and Problems
- Over 20 Increasingly Difficult Caverns
- Password Feature helps you to Progress
- Prize Competition for Skilled Players
- Humorous, Witty, a Barrel of Laughs

## Bono The Dragon and his Flourishing Business

You are Bono, a friendly dragon residing in a picturesque sea-castle. As a shrewd business-dragon, keen on "nice little earners", you make your living by selling soap to the giant monsters who bathe in the sea surrounding the castle.

With the aid of your business partner, named Fozzy, you produce the soap by collecting skeletons amongst the castle caverns and then boiling the bones in a cauldron.

However, the castle caverns are fraught with danger: there are monsters who will kill you, spiders who will eat you alive, and glooks who will block your path. It will pay you dividends to also avoid the perilous trapdoors and hidden volcanoes.

A soap-opera not to be missed!
